The Union Oil Co. 49 Carondelet St. New Orleans, La

Important to Extract Makers

A Comminutor for Licorice Root, Logwood, Drugs, Barks, Etc.

Low Price — Large Capacity — No Repairs

And very Small Power Required.

Our **COMMINUTOR** will prepare, with the least power and expense, Licorice Root, Dye Woods, Drugs, Bark and all other materials in the best possible condition for extraction or diffusion.

We build machines having capacities of from 100 lbs. to 10,000 lbs. per hour. We have at our Works a Comminutor for promptly testing materials free of charge where samples may be shipped, and we will return the comminuted product.

SPECIAL NOTICE.

We are prepared to undertake all kinds of Chemical Engineering, and the manufacture and in stallation of complete plants and special machinery for chemical industries.

We have had many years experience in a wide range of Industrial Chemical Engineering, and with our unusual combination of Chemical and Mechanical Engineering, we have been enabled to greatly cheapen the cost of manufacture and improve the quality of many of the manufactured articles by the designing and building of special machinery, and the application of new processes.

In connection with our works we have a thoroughly equipped department, where practical demonstration can be made, and all inquiries regarding matters appertaining to Chemical Engineering will receive prompt attention.

We particularly solicit correspondence from parties engaged in industries where materials require reduction and concentration, or cutting, grinding or disintegrating, and extracting either by pressure, percolation or diffusion and subsequent evaporation or crystallization in vacuum.

WEEKLY REVIEW.

The money market remains easy. Money on call ranged from 3 to 4 per cent., the average for the week being about 4 per cent., with renewals at 4 per cent. Time money is in limited supply, with the nominal quotations at 6 per cent., for 30 days, 6 per cent. for 60 days to four months.

Commercial paper is easier. Rates are 8@10 per cent. for 60 to 90 days indorsed bills receivable, 10@12 per cent. for 4 months acceptances, and 8@10 per cent. for good single names having 4 to 6 months to run. Following are the rates of exchange on New York: Savannah buying ¼ discount, and selling ¼ discount @ par; Charleston buying ¼ premium, selling par; New Orleans commercial, $2 00 premium; bank, $3 premium; Chicago, 70c premium; St. Louis, 90c premium; Sterling exchange is dull.

THE TARIFF AND IMPORTS.

The question of an early revision of the tariff laws is now prominently before Congress, and considerable interest is manifested by those likely to be affected by proposed changes. In the interval of preliminary discussion and the actual consideration of a revised schedule, it will prove of interest to examine the figures of imports during the past two years, and we have therefore compiled a short table from official reports, giving the amounts of some of the more important articles imported during the past two fiscal years. The figures show few very important variations in the amounts imported, and some of these were unquestionably due to causes other than a change in the rate of duty. In the following table are given the amounts imported during the fiscal years 1890-91 and 1891-92 of the articles enumerated, the unit of quantities being those noted in the dutiable rate: (The imports for the fiscal year of 1890-91 includes about three months under the tariff act 1883.)

Articles.	Rate of duty.	1890-91.	1891-92.
Bicarb' of potash.	3c per ℔	1,234,085	1,058,521
Boracic acid.....	5c ℔	475,377	701,625
Glycerine, crude...	1¼c ℔	11,883,896	13,594,008
" refined..	4½c ℔	446,042	661,339
Linseed.....	30c bus	1,279,238	251,058
" oil	25c gal	8,348	.....
Morphine.....	50c oz	29,564	38,758
Orange mineral...	3½c ℔	1,827,569	1,172,111
Prussiate of potash red.....	10c ℔	38,828	35,933
Prussiate of potash yellow.....	5c ℔	2,223,154	1,302,632
Red lead.....	3c ℔	519,613	812,943
Sulphate ammonia	½c ℔	19,828,645	9,906,590
Ultramarine.....	5c ℔	612,734	627,666
Vermilion	12c ℔	35,000	52,037
White lead	3c ℔	628,414	733,379

The duty on some of the articles usually denominated as heavy chemicals has been under discussion in some of the trade journals, and on these we give the figures separately showing the amounts imported during the last two fiscal years. The amounts imported, in tons, were as follows:

Articles.	Rate of duty.	1890-91.	1891-92.
Bicarbonate of soda.....	1c ℔	339	989
Bleaching powder.....	free	49,623	49,462
Caustic soda.....	1c ℔	34,281	27,867
Sal soda.....	⅛c ℔	12,745	10,049
Salt cake.....	$1 25 ton	7,557	10,029
Soda ash.....	⅛c ℔	145,532	143,251
Total heavy chemicals		250,077	241,627

These compilations will be found convenient by those who are interested in these articles, either as importers, dealers or consumers, and by all following the discussion on tariff revision. We shall, in an early issue, print a tabulated statement of the imports during the last fiscal year, and also during the last fiscal year in which the old tariff law (that of 1883) was in force, from which may be seen the effect the changes in the rate of duty has had on the imports of most of the articles in which our readers are specially interested.

INDORSING THE REBATE PLAN.

The Committee on Proprietary Goods of the National Wholesale Druggists' Association sent out their circular asking an expression of opinion of the wholesale trade on the merits of the rebate plan, its effects, and asking suggestions for improvement thereof, on the 29th ult., to which the answers have, for the most part, been prompt and gratifyingly unanimous in their indorsement of the plan. Considerably over one hundred replies were received, and among these there was but *one* firm which stated they were not in favor of the rebate plan. It is to be regretted that the members of this firm did not give their reasons at length instead of simply stating their dissapproval, as the objections they see to the plan may be of help to its promoters to improve the plan itself or its application. It may be noted that this firm is not enrolled as members of the N. W. D. A., and the reasons which prompted this attitude toward both the association and the rebate agreement may be, and probably are, similar. In these matters they exercise an unquestioned right to hold opinions opposed to the majority of their business associates, and criticism would be improper and unjustifiable.

On reading the replies it will be noticed that those who have considered the question of how best to cut off the illegitimate competitor whose actions have so seriously interfered with the satisfactory working of the plan in the West, strongly indorse the propositions contained in what is known as the Detroit plan. The adoption of this plan by the proprietors would simplify the matter of detecting and closing the sources of supply for the cutting firms. It provides for a list of names of those who are in good standing and entitled to the proprietors' quantity discount as legitimate jobbers and to whom goods may be sold, instead of a long and increasing list of names of dealers to whom goods may *not* be sold, which has thus far proved unsatisfactory by reason of incompleteness. Proprietors can give protection to retailers by withholding supplies from those dealers who are not wholesalers, but who buy for the purpose of cutting at retail.

Whatever defects or shortcomings the plan may have, they have not been brought prominently to the surface by these letters, and the natural presumption, therefore, is that the plan has proven satisfactory to a very large majority of those most interested. It is hoped that a full and free discussion of the whole question will be one of the features of the meeting at Detroit next month, and that the result will be the perfection of the same to a degree which will not leave even one firm withholding its approval. It has thus far proved of great benefit to the trade and possibly it may be so improved as to do much more in the future.

THE DETROIT MEETING AND EXCURSION FROM NEW YORK.

As the time grows short during which the members of the National Wholesale Druggists' Association must decide whether they will attend the meeting at Detroit, October 9th, the disposition to turn out largely and make the attendance greater than ever before seems to be more seriously thought of than when the change of date was first announced. At that time many who were disappointed said they did not think they would go in October. The growing importance of a full attendance and the urgent needs of representation on account of the character of the business that will come before the meeting is, however, exerting a strong influence, and the last reports would now indicate that the meeting will be the largest, most eventful and interesting of any that has been held.

A telegram from Mr. A. S. Brooks, Chairman of the Committee on Arrangements, states positively that the first session will not be held until Monday evening, October 9, at 8 o'clock, although it had been incorrectly reported that the first session would be held Monday morning.

As regards the excursion of the eastern members from this city we hear the most flattering reports. New names are coming in daily, including many who said they did not think they could go when the change of date was announced. The party now promises to be a large and very pleasant one, and the trip will no doubt prove one of the most interesting and attractive of its kind that has ever been made. The wisdom of the committee in not concluding arrangements long in advance have been more than fully justified, as indications now point to much better and more attractive arrangements than could possibly have been fixed a month ago. Everything that would add to the pleasure and comfort of the party has been done, and as new suggestions are constantly coming in it is expected that the details of the arrangements will be considerably improved before the excursion starts.

The members and the friends to accompany them will leave this city on the afternoon or evening of October 7th, and spend Sunday at Niagara Falls, where the party will not fail to spend the day with profit and pleasure. On Monday the party will proceed to Detroit, arriving there shortly after noon.

Among the features that will add to the comfort and enjoyment of the excursionists, is that several prominent houses have expressed a desire to show their good will in a substantial manner complimentary to the wholesale drug trade. The Foster, Hilson Company, 1st Avenue and 39th st., New York, will furnish an ample suply of their "Hoffman House Bouquet" cigars. The Rosbach and Franz Josef Company of 347 Fifth Avenue, New York, will supply through their president, Mr. Elijah J. Malloy, an abundance of their celebrated Rosbach Table Water. This is a very popular table water in Germany, and is considered by many to be superior to Apollinaris. Messrs. Frederick De Barry & Co., 41 and 43 Warren street, New York, have sent, through their Mr. Frank Brickelmaier, a liberal supply of the celebrated "G. H. Mumm's Extra Dry Champaigne."

In answer to many inquiries it should be known that any person vouched for by a member of the association can get the benefit of the reduced rates and other attractions. Parties who wish to go direct to Chicago without stopping at Niagara or Detroit can do so, as the tickets will be good on any trains going or coming. This will enable any of those who wish, to stop at Niagara on the way back, or to start in advance of the party.

As the rate will depend somewhat on the number who go, the committee is making an effort to get the list up to one hundred or more. Quite a number of ladies will be in the party. Those who have not yet sent in their names should do so at once to Wm. O. Allison, Chairman, 72 William st., New York, as it is expected that definite arrangements and details will be fixed this week.

ACTIVITY IN QUININE.

The present improved situation in quinine is the culmination of a period of increasing strength in the article which has extended over several weeks. During the past fortnight unusual interest has been displayed by the consuming element in the trade, the distribution rising to imposing proportions and being accompanied by advancing prices as well as a disposition to purchase beyond the mere routine requirements of the moment. The gradual appreciation of values has brought the quotations of outside operators within close proximity to those of the manufacturers, and this has served to intensify the interest of both buyers and sellers and to stimulate speculation as to the ultimate course of the market.

The causes which have been specially prominent in contributing to this state of affairs deserve to be pointed out. In the first place, it has been

obvious that for a long time buyers have hesitated and abstained from anticipating their wants for quinine, as a result of the disturbances and uncertainty connected with the monetary situation, and holders, under pressure for ready funds, were until recently obliged in many instances to liberate stocks, even in a small way, at very inviting concessions. Now, however, that the financial outlook is more reassuring, and confidence has in a measure been restored, a reaction has taken place and quinine is assuming the position to which many good judges consider it rightfully entitled. The improvement in finances, coming at the time when the fall jobbing demand usually develops, has materially assisted in rescuing the quinine trade from what might otherwise have proved a very depressed, if not disastrous, season.

As an auxiliary factor in the existing situation, reference should be made to the quotations which the producers of quinine have inflexibly maintained for the past six months or more, indicating either an abiding faith on their part in the ultimate strength of the domestic and foreign markets or implicit confidence in their ability to dictate the future course of values. However this may be, operators in the article have undoubtedly viewed the attitude of the manufacturers with undisguised complacency and even in the gloomiest moments of the late markets did not doubt the favorable outcome.

The results of the late auction sales of bark at Amsterdam and London are taken as indicative of the probability that the quinine makers are gradually approaching a stage where they will be prepared to enforce a more satisfactory schedule of prices than has heretofore been possible.

The last offerings of bark at Amsterdam consisted of about one and a quarter millions of pounds, but not more than thirty per cent. of the quantity found purchasers, and the prices realized were at least twenty-five per cent. less than those obtained at the preceding sales. These light purchases, the reduced prices brought by the bark and the disinclination of the manufacturers to oppose each other at these auctions, are presumed to show the operations of an understanding among themselves, involving the policy of controlling the output of bark as well as the production of quinine.

Abroad the situation is represented as strong, and foreign holders have apparently so much faith in the value of their property that they are manifesting no inclination to waver on quotations. Our local supplies, according to good authority, are undoubtedly much lighter than they were a month ago, and this fact adds to the strength of the prevailing feeling in the market. So far as the importations are concerned, it is noted that the quantities of quinine and other cinchona bark products brought forward this year up to date are slightly in excess of those landed during the corresponding period in 1892. The probable explanation of this circumstance is that the output of the American factories has decreased and that extra supplies of quinine were needed to meet the deficiency. In support of this theory, it is mentioned that the importations of cinchona bark into the United States for the fiscal year ending June 30, 1893, was about one million pounds less than the receipts for the preceding fiscal year, it being assumed that the bulk of this bark was intended to enter into the manufacture of domestic brands of quinine.

That the article now occupies a trong position is conceded and that the prospect seems favorable for continued firmness is equally promising, if we may judge from the practically unanimous expressions of the trade on the subject.

THE SITUATION IN CUTCH.

There have been few times within the past year or two when the prices realized for cutch were as low as those which are now being accepted by holders. It is true that during the prevalence of these low prices there have been times when a better feeling has prevailed, but this was due entirely to temporary causes, the market lapsing back into its former quiet and depressed condition as soon as these ephemeral influences had exhausted their force. Various have been the causes assigned to account for this abnormal dullness, but the apathy on the part of buyers and their unwillingness to invest more largely than for actual requirements, seems to be the cause generally accepted. That the purturbed financial conditions were the prime mover in these depreciation of prices is true, the slow collections, the attitude of banking institutions toward their clients causing many factories to close operations that otherwise might have continued—all lent its direful influence. Then again, as prices had sagged down considerably, many consumers who thought that the situation would be more lasting, held off awaiting further depreciation, but importers who were ready to sacrifice part of their profits, refused to surrender the whole and thus ceased to press their goods on the market. As a natural result supplies accumulated and at this time are more than sufficient for ordinary requirements. The government returns show that that the imports of cutch for the earlier portions of the year were very large and as the consumption was lessened greatly, due to causes already mentioned, the different distributing centers must, of a necessity, be abundantly supplied. It is thought, however, as the arrivals of the year from this time on will be greatly curtailed, the primary market showing greater strength than this, that under a vigorous demand, the several consuming outlets re-opened, that the advent of the new year will witness the return of healthy and remunerative prices.

The total shipment from Calcutta to American ports during the first half of the present year amounted to 34,776 bags, as against 55,454 bags during same period of 1892. Those for the year 1892, was 78,168 bags; 1891, 36,704 bags, and for 1890, 37,868 bags.

OUTLOOK FOR LINSEED OIL.

The sudden and sharp decline in the price of linseed oil and the uncertainty which obscures the future of the article have aroused unwonted interest in the trade and no little perplexity is felt at the eventual turn that affairs may take. The long period of steadiness which preceded the late collapse of values induced many to believe that uniform quotations would be a feature of the business during the balance of the present year, and naturally the unexpected change in the complexion of the situation, was not only a surprise but also a bitter disappointment to a large number of interested parties. The leading causes which are presumed to have precipitated the crisis have heretofore been reviewed in these columns, but a few late and material developments should be noticed in this connection in further explanation of the continued downward course of the market. It has transpired that up to the time when the first decline occurred an understanding subsisted between the combination of crushers and the independent producers, whereby the maintenance of a regular schedule of quotations was made obligatory on all concerned. This agreement was for a term which expired during the latter part of August, and as the arrangement named extended to nearly every mill in the country, it was a comparatively easy matter, while they shared each other's confidence, to exact full prices on the sale of oil. As the time approached for the termination of the compact, it became evident that disturbances would ensue, and without waiting to be released from their obligations, it is asserted that some of the Western crushers took the initiative, covertly at first, but openly afterwards, of cutting prices and thus inaugurating the demoralization from which the trade is now suffering. Their chief incentive for commencing this war fare, it is believed, was the dull condition of business immediately preceding the break and the financial pressure felt throughout the trade, which forced many into an effort to realize on their stocks. The relations between the crushers became strained and the fierce competition which has since prevailed, became established. Within the past few weeks the friction and antagonism between the contending factions has increased and in order to counteract the existing depression and restore values to their former position, a meeting of the most influential crushers and dealers was called to assemble here this week, but for reasons which are not yet definitely known, only a few persons were in attendance, and the proposed conference did not take place. It is rumored, however, that the attempt to hold the meeting will be repeated at an early date. From these circumstances it is obvious that the producers of oil are not only anxious but uneasy at the prospects afforded by the present surroundings. Many of them doubtless realize the difficulties to be encountered in an effort to conciliate and hold under restraint the rank and file of the crushing fraternity, whose disaffection and loss of confidence in the stability of pledges and promises are deep seated and virtually insurmountable. That success can attend a conference as outlined, is regarded as very questionable under the aspects of the situation and the outcome of the movement will be watched with eagerness. The demoralization of prices has brought the value of oil down to a point where manufacturers claim that no profit is left for them, but as these assertions are common that argument loses much of its force.

In view of the perturbed situation in linseed oil, the conflicting opinions on the prospects, the antagonistic tactics of the western crushers and the widespread demoralization of values, it would be reasonable to anticipate an indefinite continuance of the present depression.

AUGUST PETROLEUM STATISTICS.

The monthly report of the several pipe lines has been made public and the usual tabular statement will be found on another page of this issue, giving full details, with comparisons of production, consumption and stocks. The report is decidedly bullish in its tenor and contains several features of special interest. An increase in production was not looked for, the field reports leading us to expect that the runs during August would barely reach those of July, although the production of the new wells showed a small increase. The reduction in stocks has been large, however, and while the deliveries fell below those of July they were nevertheless largely in excess of the average of the preceding seven months of the present year. The probabilities are that consumption will continue fully up to the average of the past eight months and this will mean a continuous drain upon the suplus, which is now being reduced at the rate of about half a million barrels per month. There is, of course, the possibility that a new pool of some magnitude may be discovered which will, for a time, check the decrease, and the higher prices that are regarded as assured the producer, may also stimulate development work in the fields to an extent which will accomplish the same result by the increased number of wells drilled; but the conclusion appears to be a natural one, that the fields in the Pennsylvania oil regions are no longer equal to the demands being made upon them, and that the time is not far off when other sections, more remote, will have to be developed to meet the world's requirements.

The production in the Pennsylvania fields during August was 2,752,364 barrels, which shows an increase over the July production of 116,658 barrels. The average daily runs during August was 88,786 barrels, while the average in July was 85,022 barrels. The daily average in August exceeds that of the preceding seven months by over four thousand barrels, but falls short of the daily average of 1892 by 767 barrels. The deliveries reached a total of 3,247,322 barrels, which shows a falling off of 70,998, but they were the largest in amount of any month in the history of the industry, July alone excepted. The deliveries during August have brought the average for the eight months near 3,000,000 barrels, and it is probable that this average will be reached for the entire year. The stocks in possession of the pipe lines at the close of the month amounted to 14,499 090 barrels, which shows a decrease during the month of 429,589 barrels. The decrease in stocks since the beginning of the year now amounts to 2,896,299 barrels, which is at the rate of 362,037 barrels per month. The decrease has now been steady for eleven months, during which time there has been a shrinkage in stocks to the extent of 4,345,847 barrels.

The report of the Buckeye Pipe Line Company, giving the statistics of Ohio oil for the month of August, differs materially from the other. The runs during August amounted to 1,390,894 barrels, which is an increase over the July runs of 100,903 barrels, and an increase of 218,100 barrels over the average of the eight months of the present year. The production in August is also the largest in the history of the Ohio fields. The deliveries during August amounted to 1,040,860 barrels, which shows a decrease of 111,514 barrels, and is 189,697 barrels less than the average of the eight months of this year, and 345,118 barrels less than the average of the twelve months of 1892. The stocks at the close of the month amounted to 18,129,767 barrels, making the increase during the month 350,034 barrels. Notwithstanding the increase during the last four months the stocks are still 474,675 barrels smaller than they were at the beginning of the year.

IMPORTS AND EXPORTS FOR SEVEN CALENDAR MONTHS.

On another page will be found a tabular statement of the imports and exports for seven calendar months, together with a comparison with the seven months ending July 31, 1892. In the generality of articles enumerated under this heading there exists

too little difference to require special comment, but in those few where a great dissimilarity occurs, either as increase or decrease, we make editorial reference.

Among the many imports for the period under review, argols, or crude tartar, is distinct, there having been over 3,000,000 pounds more delivered for consumption during the past seven months than during the corresponding period of 1892. The imports of cinchona bark show a decided decrease, as only 1,468,168 pounds were delivered during the seven calendar months of 1893, as against 2,329,018 pounds for the same period of 1892, a gain of the former over the latter of 860,850 pounds. Comparing the imports of cutch and gambier, an enormous increase is shown, the actual figures as compiled being: 1893, 23,351,993 pounds, and for 1892, 14,370,127 pounds. The imports of indigo show a decrease of about 75,000 pounds. The increased demand from the south for fertilizing material has resulted in greatly increasing the imports of muriate of potash, it having been proved that the enlarged cotton crop of 1892 was directly due to its efficacy. The compilated figures as given are 40,748,339 pounds for 1893, as against 35,577,019 pounds for 1892. Opium evidences a decrease of 17,248 pounds. Sulphate of quinia continues in excess over former corresponding periods, due to the inclemency of last winter. The figures, however, do not at this time show as great a dissimilarity as was set forth earlier in the present year. The figures as presented are: 1893, 2,131,340 ounces; 1892, 2,123,246 ounces. Glycerine is computed as being 1,000,000 pounds in excess. The imports of ground sumac, due to the greater demand, evidences a gain of 2,624,428 pounds over 1892, the statistician giving the figures as follows: 1893, 9,822,785; 1892, 7,198,357 pounds.

The exports of ashes, pot and pearl, show a decrease of 416,494 pounds, as against 1,100,679 pounds in 1892. In like manner alcohol is also conspicuous, 124,764 gallons having been delivered for foreign consumption in 1893, as against 1,088,031 gallons for the corresponding months of 1892. This is said to be partly due to the disrupted condition of distillers and to the continental markets being glutted. The exports of fish oil show a contracted volume, but as the season's work of 1892 was exceptionally unproductive there was left only a small quantity for foreign consumption. In fact, at the close of the season oil was imported as an offset. The exports of paraffine wax, as defined by the United States statistician, gives additional proof of the heavy requirements of this article for foreign manufacture. The figures as presented show that in the seven months of 1893 52,594,198 pounds were delivered for consumption as contrasted with 36,324,651 pounds during the like period of 1892. A decided increase of 16,269,547 pounds.

TRADE ITEMS.

Asphalt mines have been opened near Russellville, Ky.

Large deposits of yellow ocher have been found in Lake county, Fla.

W. M. Braser & Co., this city, oil cloths, are closing up their business.

L. Nicholsburg has secured a judgment of $520 against the Eagle Distilling Co.

Mr. Sydney Leech and Mr. Thos. Robertson, of Leech, Neal & Co., arrived last week.

R. F. Cronwell has secured a judgment for $141 against the Rogaline Manufacturing Co.

The Geyserite Soap Co., has been organized at Denver, Col., with a capital of $150,000, to manufacture soap, soda, etc.

L. M. Simons and W. H. Wilson have established a candy manufactory at Brenham, Tex.

A judgment for $146 has been secured by S. E. Capers against the Stearns Fertilizer Co.

The Philadelphia Fertilizer Co., has been organized at Philadelphia, Pa., with a capital of $250,000.

A judgment for $381 has been secured by Enoch Morgan's Sons' Co. against John Bischoff and Christian D. Postel, jr.

The Quaker City Glass Co., has been organized at Quaker City, O., with a capital of $25,000, to manufacture window glass, etc.

The Chas. Schatziein Paint Co., has been organized at Butte, Montana, with a capital of $25,000, to deal in paint, oil and glass at wholesale.

Last week F. W. Ostrom and Orange Merwin were appointed receivers for the Lincoln & Ostrom soap works at Bridgeport, Conn. The capital stock of the embarrassed firm is $50,000, and the number of men employed fifty.

The Aldag Paint and Varnish Co., has been organized at Indianapolis, Ind., with a capital stock of $12,000, to manufacture paint, oil, varnish, etc.

An injunction was recently granted by an English court against a dealer in Bath who had been selling pills of his own manufacture resembling in appearance Carter's little liver pills, representing them to his customers as being the genuine American make.

Messrs. Bayless & Beckalow, Binghamton, N. Y., offer 82 % crude wood alcohol at 70 cents per gallon. This is not a new concern, having been established in 1867, and their product has uniformly proven satisfactory. They wish it understood that they are not connected with any trust.

A whale weighing fifty-seven tons was washed ashore near South Bend, on the Pacific coast, last week. Scientists say it was 986 years old, which is within fourteen years of the extreme allotment of whale life. It measured 174 feet 8 inches in length and is estimated to be worth $10,975.

In all this great and glorious country only one man has been found who ought to read the REPORTER but who does not. A corn cure man of Jersey turned up at Detroit September 11th to attend the N. W. D. A. meeting, and was very much surprised to find the gathering so small—no Menn-en attendance but himself.

The loss of the turpentine men through Georgia by the recent storm will be about 10 per cent. Crops were also badly injured. A concern at Lyons has commenced a new industry in the manufacture of lampblack. The stuff used in its manufacture will be the cotton batting that is used in straining rosin, and the chips and trash that are skimmed off the still.

Suit for $100,000 damages has been instituted by T. J. Preston & Co., oil manufacturers, Newark, N. J., against the Newark Electric Light and Power Company, whose works adjoin Preston & Co. The latter allege that their factory and stock have been damaged to the extent of $100,000 by the vibration of the electrical machinery used by the electric company.

Chief Judge Ehrlich of the City Court granted judgment last week on a note for $500 in favor of the Paterson National Bank against Horace K. Thurber, the maker, and John H. Downes, the indorser. The note was executed by F. B. Thurber under a power of attorney from Horace K. Thurber on June 10 last for two months, and it passed to the bank through Downes.

At the World's Congress on Social and Economic Science at Chicago last week attention was given to the question of weights and measures, and of coinage. Judge A. N. Waterman occupied the chair. He made a brief introductory speech, in which he advocated international coinage. He said there should be international mints, and also an international system of weights and measures.

The Palmer-Willock Manufacturing Company, Brooklyn, N. Y., successors to Saidie Palmer, make a specialty of every description of advertising marter for manufacturers of ready mixed paints, coach and car colors, wood stains, graining colors, etc., and have ample facilities for turning out satisfactory work. They will send proofs for approval, so that there may be no mistake in sample color cards as to shade, gloss, etc.

The British Consul at Buenos Ayres reports that the decrease in the export of linseed, since 1885, does not imply a decrease in the production of that product. On the contrary there has been a very great increase, but the local home consumption has been enormously increased by the rapidly increasing national manufacture of oils, which was not the case formerly. And the importation of foreign oils has decreased correspondingly.

The Stassfurt Potash Syndicate has fixed the following prices for the potash salts used in the Eastern provinces by agriculturists for manure, a sliding scale having been adopted based upon the relative distances of the destinations to which consignments are sent: Kainit, 1·50 M, per metric ctr.; karnallit 90 pfg. per mtr. ctr.; sylvinit, 2·30 M. per mtr. ctr.; and concentrated potash manure 8·25 M. Purchasers at a distance of more than 400 kilometers will be allowed a reduction of 1 pfg. per mtr. ctr. for the crude salts and 2 pfg. for concentrated salts for every 20 kilometers.

Messrs. Schering & Glatz, this city, are sole agents for the United States for betanaphthol-bismuth, cresol-bismuth, phenol-bismuth, pyrogallol-bismuth and tribromphenol-bismuth manufactured by Dr. F. von Heyden's successors in Radebeul near Dresden, Germany, and supplies may now be procured of these preparations without delay. Circulars giving the results of clinical experiments with these preparations will be mailed on application.

The valuable whales have about all disappeared from the North Pacific. Behring and Okhotsk seas no longer contain them, and the Arctic ocean is the only recognized whaling ground left. There are but fifty whalers now afloat in the western ocean, while a half century ago there were 600 of such ships. There are ten steam vessels in this fleet, and the rest are relics—ancient barks and brigs that date from the long ago, are seldom insured and with difficulty secure crews.

The disastrous cyclone which swept up the Atlantic coast from the West Indies recently causing great damage everywhere in its path, wrecked completely the phosphate dredging plants of the Coosaw river mining companies of South Carolina, and, of course, it has cut off thereby the production of phosphate rock from that source. This will cause, therefore, a restriction in output of about 10,000 tons per month until operations are rssumed again on the same scale as heretofore.

The naval stores buyers, who now own practically all the stock on the wharves at Savannah, have reached an agreement by which they are getting deliveries from the Savannah, Florida & Western R. R., and Harmon's wharves from the stock of rosin and turpentine which was damaged by the storm. The total loss from the storm, the buyers think, will not go over one-half of one per cent. This is by no means small, however, when it is considered that there were 137,000 barrels of rosin on the wharves. This means a loss of about 700 barrels of rosin, besides a large amount of turpentine, which was also destroyed.

The paper-bottle works at Glassboro, N. J., have shut down, and it is reported that operations will not be resumed. This establishment is the only one of its kind in America, and with the closing of the doors a unique industry will be abandoned. Paper bottles are comparatively a recent invention, and their market is limited principally to two-ounce ink bottles. They were largely used in export trade, where duties are levied according to gross weight, as they only weigh one-third as much as glass and are non breakable. The bottles are made by machinery, and but little hand labor was required in their manufacture.

A fire broke out on the top floor of No. 60 Pearl street early last Tuesday morning that proved very stubborn. It started in the storeroom of Minnett & Co., dealers in varnish, and the stock, which is said to have been large, was completely destroyed. An explosion was caused by the combustible stuff which blew off the roof and part of the rear wall. The fire then worked its way down to the third floor, occupied by Olmstead & Co., manufacturers of chemicals, where it burned fiercely. The building was damaged to the extent of $10,000, Minnett & Co.'s loss is estimated at $8,000, and Olmstead & Co.'s at $1,000. Buildings on each side were damaged to the extent of about $8,000.

☞ *For other items see page 25.*

PETROLEUM NOTES.

The world's greatest gas well has just been completed by D. T. Davis, on the Ross farm, in Case township, near the Findlay's new 18,000,000 foot gusher. The newest well is good for 50,000,000 cubic feet a day.

Interesting statistics about the petroleum industry of Pennsylvania are given in the report of Chief Bolles, of the Department of Internal Affairs. A larger percentage of oil product is sent abroad than that of any other product except cotton. A gallon of oil in bulk cost in 1861 not less than 58 cents, and in 1892 not more than three and a half cents. Pipe lines aggregating 25,000 miles have been laid, and 59 bulk steamers are now employed in transporting the oil to foreign countries. The total capital invested in the oil industry of the State, including vessels and pipe lines, is $300,000,000.

The St. Helens, a new tank steamship sailed hence last week with the largest cargo ever shipped. Unlike other tank steamers her engines are located directly amidship. Usually in tank steamships the engines are placed well aft, leaving all forward of the engines unobstructed. Besides this a greater degree of safety is assured by having the furnaces remote from the highly inflammable cargo. The engines of the St. Helens are inclosed in a steel bulkhead, and while practically surrounded by the cargo, the danger of ignition is no greater, and better speed is attained. The new vessel's tonnage is 4,007. She is schooner rigged, built of steel, and has ten compartments for carrying oil.

At Canton the importation of kerosene in 1892 was less than that in 1891 by 1,333,0000 gallons. At Kowloon and Lappa, however, says the British consul, the importations show a very large increase, so the aggregate for the three ports was 2,258,006 gallons above that of 1891. It will be remembered that kerosene was one of the chief foreign commodities for which transit passes were used in 1891 and the early part of last year. In 1892 there were sent into the idterior, chiefly to Kuang-si, under transit pass, 61,970 gallons, of which 2,000 gallons were Russian and the rest American. The importation of Russian kerosene in 1892 at Kowloon and Lappa was beyond that of 1891 by the large amount of 853,567 gallons.

The tank steamship Astral, which usually crosses the ocean in about sixteen days, has not been heard from since she left Shields, in ballast for this port, on July 24, nearly two months ago. She delivered a cargo of oil in bulk at Stettin two months ago, and sailed thence on July 19 for Shields, where she coaled for the voyage westward. She carried a crew of about twenty five men, most of whom were shipped at British ports. She was built at Newcastle in 1889, measured 2,249 tons, and was driven by triple expansion engines. She usually took a high northerly route, and may have met disaster by collision by an iceberg. There were no great storms in the latter part of July and the early part of August that would have been likely to overwhelm the Astral.

The existence of petroleum in the Emilia and the Province of Chieti, Italy, has been known for a long time, but the exploration of the various sources has been very indifferent. Recently, however, attention has been turned to the finding of sources of petroleum, there being no tax on the native production, whilst foreign petroleum is subject to a duty of 48 lire per 100 kilos. The Emilia supplies by far the best native petroleum; it is light, clear, opal colored, and contains little bituminous matter; 50 to 60 per cent. of oil for burning, are obtained from it. The spirit of enterprise is now particularly directed to the "Emilia," where a great many borings have lately been made. According to the *Deutsche Handels-archiv*, the value of the oil obtained which in 1882 reached only 86,845 lire, was in the year 1991, 328,800 lire. The principal refinery is in the Province of Parma.

The old pools of Wood county have turned the meridian of their life and are slowly, but surely passing on to their final end. The field was discovered in 1888 or 1889, and reached the height of its glory in July, 1890. The largest well found in the pool belonged to J. S. Landy, located on the Nichols farm, in the northeast quarter of section 15, Montgomery township,

When first struck, it started off at 500 bbls a day and it really gave the field its boom. The average of the new wells, when the field was at its best, was 40 bbls a day, but the average now of new wells is not more than 15 bbls a day. It is safe to say the average production of the wells in the center pool is not more than 6 or 8 bbls a day. The territory has good staying qualities and there are a number of wells drilled some five years ago that are still making a fair production. Its highest production was never more than 8,000 bbls a day, while its present, on a conservative estimate, is not making more than 4,000 bbls a day.

OBITUARY.

JOHN M. MAISCH.

On Tuesday last came the announcement of the death of Prof. John M. Maisch, at his home in Philadelphia. Johann Michael Maisch was born in Hanau, Germany, on January 30, 1831. He received a scientific education, and, in consequence of his taking part in the Baden Revolution of 1848, emigrated to the United States in 1849, where he made his first acquaintance with pharmacy, serving in the capacity of an assistant in Baltimore, Washington, Philadelphia and New York. He also passed some months in a chemical factory. In 1854 he became associated with Professor W. Procter in the editing of the *American Journal of Pharmacy*, this being the beginning of a literary career which has continued up to the time of his death. In 1859 he acted as an assistant to Edward Parrish in his private school of pharmacy for medical students, and in 1861 was appointed professor of materia medica and pharmacy in the New York College of Pharmacy, at the same time working in Squibb's laboratory. He left New York after two years to undertake the management of the U. S. army laboratories which had been established in Philadelphia. This he held until the end of the war, effecting during his two and a half years' office a saving of between three and four million dollars. After this work Mr. Maisch opened a pharmacy in the Quaker city, continuing meanwhile his literary labors, and in 1867 was appointed professor of botany and materia medica in the Philadelphia College of Pharmacy. He has acted as permanent secretary to the American Pharmaceutical Association since that date. He holds the honorary title of Doctor of Pharmacy from the Maryland College, and of Magister of Pharmacy his *alma mater*.

J. C. EASTMAN.

A telegram was received on Tuesday last announcing the death of Mr. J. C. Eastman and his son Jay. R. Eastman at Havana, Cuba, of yellow fever. Mr. Eastman came to this city in 1885 and organized the firm of Edsall, Eastman & Brigham, refiners of mineral oils, and established a plant in South Brooklyn. Later he became identified with A. C. Bunce under the firm name of A. C. Bunce & Co. They continued in business until about ten years ago when their interests were merged in those of the Standard Oil Co. He then went to Havana, where he continued in the refining business until his sad death occurred. Mr. Eastman was a man of exceptional character, an earnest business man, a good husband and a kind father and his death will prove a sad blow to his many friends in the oil trade.

CORRESPONDENCE.

You're Wanted at Detroit.

INDIANAPOLIS, Sept. 1, 1893.

Editor OIL, PAINT AND DRUG REPORTER:

That members of the drug trade who hesitate about attending the Detroit meeting of the N. W. D. A., for reasons of economy, or of personal convenience, should ask himself squarely, "Would my business benefit by the abrogation of the reforms which the association has built up after years of effort?"

If he answers himself in the negative, as he undoubtedly will, let him then ask, "Do I not owe it to myself, to my business and to my friends, that I put aside the selfish feeling which makes me hesitate?"

The times have been hard, and uncertainty has been the bitter daily bread of all of us; but how very much worse it would have been, if every man's hand had been turned against his neighbor; if instead of the benificent operation of the rebate plan, there had been a stupid, brutal, slaughtering of prices: if instead of friendship and mutual esteem, there had been hatred, suspicion and distrust.

No one supposes for a moment that the present system of selling proprietary articles is flawless in its working; any more than he believes that a sense of universal brotherhood is an underlying and fundamental principal of human relation.

But to reduce the number of lapses occurring in the system, and to foster a feeling of inter relation and mutual responsibility, is certainly a far seeing and progressive policy, and that is precisely the work which the association has in hand.

A man who has been in any way derelict, is more apt to remember it when he comes face-to-face with his fellows, and to go home from the meeting with a renewed and strengthened resolve of right-doing.

The cutters, the kickers, and the renegades of all sorts and conditions, do not attend the meetings of the association. It is the men who are actuated by higher motives and purer aspirations than mere animal greed, who leave their desks, and relinguish their pleasures, to meet once a year in convention.

It needs no prompting, ordinarily, to bring every good man and true, promptly at the call of the president, and it is apparent even now, that the Detroit meeting will be largely attended. But to those who hesitate for any reason whatever, we say, put aside, for one little week, your individual affairs, and do your plain duty by taking up the affairs of the whole.

Though you may make no motion, speak no speech, tell no story, or even cast a vote, your presence will be an earnest of good faith.

Therefore, we say, by all means go.

REBATE.

A Correction.

PITTSBURGH, Pa., Sept 14, 1893.

Editor, OIL, PAINT AND DRUG REPORTER:

Referring to your issue of 11th instant we find that your compositor or Mr. Kline's secretary has made too "free" with our reply to his circular by inserting that word in our reply to his fourth question.

We wrote, "No. There are twice too many on the list now."

You print it, "There are twice too many on the free list now."

Ordinarily we do not correct or explain when we are misquoted in print, but this is a case where our convictions are so decided that we desire to stand right on the record.

If the contract plan fails it will be simply because it has been overloaded, and we regret to find so many leading dealers in favor of increasing the list rather than cutting it down to a point where all contracts can be enforced.

L. H. HARRIS DRUG CO.
L. H. Harris, President.

MISCELLANEOUS.

The Humphreys Golden Wedding.

Comparatively few couples are spared to enjoy the pleasure of celebrating the fiftieth anniversary of their marriage, their golden wedding, but such was the good fortune of Dr. Frederick and Mrs. Humphreys in August

The reception took place at Monmouth Beach, their country seat, of which there is none handsomer on the Jersey coast, the grounds running to the broad Atlantic; the beautiful house of "many gables" was even more attractive than ever, when decked with golden flowers, and when there was gathered beneath its spacious roof, children, grand children, kinsfolk and friends from far and near.

The dresses of the ladies, the strains of sweet music, the fragrance of flowers, and the many rich and rare presents, gave the effect of fairy land.

The scene seemed complete, when the central figure, erect and handsome as of yore, Dr. Humphreys, and his sweet faced wife, children, grandchildren and friends, stood while the golden Loving Cup was passed from hand to hand. Each sip of the rich wine was accompanied by a silent prayer for the continued happiness of our host and hostess.

All their children and grand-children were present: Fred, H. Humphreys and wife, with their two children, Frances and Frederick. The Rev. F. Landon Humphreys and wife, with their three children, Helen, Landon and Malcolm. Fanny B. Humphreys, widow of Jay Humphreys, and her two children, Jayta and Frederick. There were also present Dr. Humphreys' sister, Mrs. Cooke, and Mrs. Humphreys' sister, Mrs. Mowe.

[From our regular correspondent.]

Borax and Quicksilver in California.

SAN FRANCISCO, Sept. 4, 1893.

The riches of our borax deposits are now beginning to attract general attention amongst capitalists and the public generally. The borax works in Oakland have been shut down for a while, but probably not for long. This is simply in line with the general depression of business felt in California as well as elsewhere, but the great wealth of our borax deposits cannot be affected by any temporary causes such as the dullness referred to. Nevada is full of deposits of this nature, more or less valuable. San Bernardino county, in this State, has very rich deposits of borate of lime, known as colemanite. Curry county, Oregon, has a deposit of a very fine kind, known as priceite. We, however, very seldom have any from our sister State.

There were very heavy exports of borax during August—899,030 lbs. by sea, of which 802,965 lbs. went to New York, 93,773 lbs. to England, and 2,322 lbs. to Australia. The value of this was $63,000. The borate of the Pacific coast is entirely free from coloring matter and from iron. There are now two vessels loading, one for New York, the other for England. The exports for the year to date have been less than for the corresponding period in 1892.

Some time since there was a reduction of $3 a flask in quicksilver, but since my last letter there has been a movement in the contrary direction, an advance of 50 cents being scored. The quotation now is $40.50@41. There was a considerable reduction in the receipts of quicksilver until the past three or four days. On one day 697 flasks came to hand. This brought up the total receipts of the month to a little over 1,900 flasks. This, however, has been less than for some months past. Receipts to date have reached 17,000 flasks as against about 14,000 flasks for the same time last year. The export movement has been light during the past two weeks. For the past week there was none. The exports by sea to date have been 10,523 flasks. The total exports by sea and rail have been about 1,600 flasks more during the present year to date than during the past. In regarding the receipts we must always bear in mind that New Almaden never sends her product to this city, but that it is either shipped East or to consumers; but the product of this once famous mine now cuts little figure in the grand total and probably will never again attain to its old fame, as the possibility of striking anything new in the line of ore veins decreases steadily, and Santa Clara will in this matter have to yield the palm to her newer and more vigorous competitor, Napa, whose importance as a quicksilver producer increases daily.

The Trade on the Rebate Plan.

We this week continue the publication of the letters received by the Committee on Proprietary Goods of the N. W. D. A., in response to the circular inviting an expression of opinion on the rebate plan:

San Francisco, Sept. 5, 1893.

We are in favor of the continuance of the rebate plan, believing that it gives to wholesale druggists the opportunity of making more money on patent medicines than they would if this plan was not in operation. We would regret to see it broken up and the wholesaler compelled to sell this important line of goods without the protection which the manufacturer is now giving them. In our territory we believe that the contract is lived up to, as we hear of no complaints among the wholesale houses of its being violated, and the jobbers, so far as we know, are in sympathy with the plan and desire to see it maintained.

We deem it desirable to try and induce those proprietors of patent medicines who as yet have declined to sell their goods on the rebate plan, to adopt it. By means of the rebate plan of selling patent medicines the ruinous competition which existed in the past with this line of goods is taken away, and we are permitted to make a fair profit on them. It is for the benefit of the manufacturers, in our opinion, that this plan should be continued, as the profit that we are making on patents sold under the term of the rebate contract makes it an object for us to push their sale. Should this protection be withdrawn, and we are obliged to sell them without a profit, it would result in their sale being discouraged as much as possible by the jobber, who would give preference to those articles that paid the largest proportion of profit.

REDINGTON & CO.

Boston, Sept. 6, 1893.

Responding to your circular letter, we would say we are not and never have been in favor of the rebate system.

WEEKS & POTTER CO.
per W. G. NUDORF, Treas.

Louisville, Ky., Sept. 7, 1893.

In response to inquiries with reference to our views as to rebate plan, we would say:

First. We do not hear more complaints of evasion or violation of the the terms than formerly.

Second. It is generally and faithfully maintained.

Third. We have no personal knowledge of members desiring to be released from contract terms—on the contrary, there is a general desire to maintain the system.

Fourth. We consider it very important that every proprietor of prominent articles should be induced to place their articles upon the list of rebate goods.

Fifth. We believe that the present system is as good as can be devised. No system can be planned which would be perfect. The system, we believe, is important to the interest not only of the wholesale drug trade, but as well of the proprietors of popular remedies.

We trust no action will be taken by the National Wholesale Druggists' Association looking to any change—on the contrary, we trust the united efforts of the members of the association at the Convention in Detroit will be directed to the maintenance and strengthening of the system in the interest of the whole trade.

Any member who will reflect upon the condition of this department of the wholesale drug business before the organization of our association will call to mind the fact of the unsatisfactory prices obtained, in fact, not only was the cost of handling not added, but in many cases the goods were sold at about first cost.

This line would certainly get back into the same unfortunate condition without the protection afforded by the present rebate plan. The effects of the evil would be at present greatly more detrimental because of the fact of the increase in the proportion of the sales in this class of goods.

We desire to express here our appreciation of the earnest and faithful efforts made by yourself and members of your committee in the discharge of the laborious duties entrusted to you in the management of this the most impertant branch in the work of the association.

ROBINSON-VETTET CO.

Baltimore, Sept. 9, 1893.

In reply to your inquiry, we would say that there has been less trouble with us during the past year than during any previous one.

The trade here recognizes that a uniform price gives better satisfaction to a greater number than a varying one. A steady market is safer than a speculative one, and while some prefer a vacillating price, such as is given to goods that are not sold under contract, it is certainly safer and every one feels more security in buying goods that they feel have a fixed price and at the same price as their competitors.

We find it easier and less expensive to sell goods that are on the contract plan. We do business with less friction under the rebate system than we did before. Our customers are willing that we should make a living, and while there are a few to whom we sell that offer objections to the rebate plan, the percentage of faultfinders is very small.

We have stores that seize any prominent article in the market and advertise it at cut rates, but these items are not always goods that are sold on the rebate plan. They will take anything that happens to be well advertised, no matter whether a rebate article or not.

The rebate plan of selling goods is a good plan, and our only regret is that it does not include every item of patent medicines that is made. If such a thing could be accomplished, the maker, buyer and seller would be, we think, better satisfied than they now are.

The contract plan is not so perfect that it may not be avoided, but where is there a plan that has not been broken into? It is the best one today that we have ever had, and although some few may avoid its rules, it gives many more an opportunity to adhere to them.

There appears to be a preference

NATIONAL LEAD COMPANY'S

Pure White Lead Tinting Colors

are having an enormous and daily increasing sale.

Beautifully Painted Houses are their best advertising signs,

Painters Everywhere attest their uniformity of strength and color as well as their great convenience to the painting trade.

Every Paint Dealer should carry a stock of the National Lead Co.'s Pure White Lead Tinting Colors.

NATIONAL LEAD COMPANY,
1 Broadway, New York.

among the retail trade for such preparations as we are not permitted to sell in lots of less than ¼ dozen, except at an advance over list prices.

We trust that some effort will be made at your next meeting to add to the list the names of the houses who are still outside.

GILPIN, LANGDON & CO.

Pittsburg, Sept. 11, 1893.

We take pleasure in stating that we have had less trouble in getting full rebate prices this year than in any previous one, and we believe that the schedule prices are very generally maintained by the jobbing druggists of our city, and our competitors in Pennsylvania and Ohio.

Of course, we hear occasionally of deviations from contract prices, divisions of full quantities, etc., but find upon investigation that the most of these are groundless, and balance not serious enough to disturb the maintenance of prices. The most serious trouble we have arises from sale by proprieters to wholesale grocers, who, as a rule, are not careful to observe the schedule. There can be no doubt that the plan would be greatly strengthened by proprietors selling only to jobbing druggists. If this could be accomplished, proprietors would find it comparatively easy to enforce the terms of their contracts. We do not think it desirable to induce any more proprietors to place their goods on the rebate plan, unless they have considerable sale and sell from fifty cents and upwards. We think, also, that when the sale of the rebated article will not justify the purchase of the manufacturer's quantity, it should be dropped from the list. We have a considerable number now on the list that should be stricken off.

As to the desirability of retaining the rebate plan we think there can be but little difference of opinion. This class of goods forms so large a part of the business that some form of protection from loss is absolutely necessary. Before this system went into operation these goods were sold at about or below real cost, and their rapid increase in number seriously threatened the stability of the drug trade throughout the country. During its operation these many years, the trade has been undoubtedly in a healthier condition, and in our opinion, should the rebate plan be abandoned, the same perilous condition would soon follow, as before it went into operation.

The rebate plan remains about the same as when first introduced, and is based upon the mutual honor and loyalty of both proprietors and dealers, and considering what it has accomplished, it is worthy of admiration. It has worked so well that there has been a reluctance to amend it.

It is now very evident that some plan should be devised that will prevent supplies from reaching some parties who are known to pay no attention to the schedule prices, and who are making capital out of the honorable observance of the contracts by others. We sincerely trust that at the coming annual convention such adjustments will be made as will result in the perpetuation of the rebate plan.

GEORGE A. KELLY CO.
GEORGE A. KELLY, Pres.

Grand Rapids, Mich., Sept. 1, '93.

Rebate prices are generally maintained in this territory, and we hear of no evasions or violations except from Cincinnati.

We think your information in rerd to any member desiring to be released from contract terms, is not correct. This is indicated by the many meetings of the local exchanges and their resolutions to abide by the rebate terms.

We think it very desirable to induce proprietors, whose goods are still on the free list, to place their goods upon rebate terms. Patent medicines are now such a large proportion of the sales of wholesale druggists. that the return to the competition of former days, and selling them on a profit of from 1 to 3% would be ruinous.

We think the resolution adopted at Detroit, to prevent evasion, is the best yet offered, and hope to see it adopted by the proprietors.

HAZELTINE & PERKINS DRUG CO.
By H. B. FAIRCHILD.

Memphis, Sept. 1, 1893.

In reply will state:

1st. We hear less complaints of cutting and violation of contract terms than last year or for last several years.

2d. Rebate prices are maintained fully by all the jobbers so far as we know and we have only one among the retail trade who continue to cut prices. Occasionally some of the others do so to maintain their trade, but not from choice.

3d. We have heard of no desire of any one to be released from contract terms, but that terms and conditions may be so amended as to make more effective the conditions of rebate plan of doing business. There is much complaint with jobbers in regard to many proprietors not giving large rebates and more equitable terms, so as to enable them to make a living handling such goods, as our experience teaches us that it requires fully 10% to pay expenses. On such goods as we handle at less rebate we lose money, and we have less trouble and make better profit on goods we handle that are not on the rebate list than with many that are.

4th. We would like to see all proprietary medicines on rebate list if equitable terms and moderate discounts are accorded the jobber and retail dealers.

5th. We are desirous of continuance of rebate plan, feeling that it has been of great benefit to our business and would like to see it more effective.

6th. If proprietors would cease selling to outsiders and to cutters as well, and would confine their sales exclusively to members in good standing of N. W. D. A., and these signed to to refuse all cutters goods unless they maintain prices, cease cutting or offering goods at cut prices, would, if strictly carried out, lessen the evil and finally eradicate it entirely. But so long as proprietors encourage and maintain the cutters with full supply of their goods at best prices and terms, the evil will grow. "Anyone who has the money can obtain the goods" is the answer all cutters make to jobbers when sales are refused them and we know from observation that such is true, and they get their goods direct of proprietors in some way regardless of what restrictions proprietors pretend to enforce. We have cases here in our city.

W. N. WILKINSON.

New Orleans, Sept. 2, 1893.

In response we beg to say that reports of violations of rebate contracts are received from time to time, but not with the same frequency as formerly. We have heard of some expression in a vage sort of way of a preference for the abrogation of the rebate plan, but from houses practically the greatest beneficiaries of the

THE BEST

builders use only the best materials---lumber, brick, lime, cement, sand---whatever goes into the construction of a building; they employ only the best workmen and pay the best wages; they get better prices for their work than their less careful competitors, and always get the best contracts; they paint their work with

Strictly Pure White Lead

manufactured by the "Old Dutch Process" of slow corrosion, and with one of the following standard brands:

system, and we are inclined to think that should it come to a test they would be found strong advocates for the maintenance of the plan. We believe it very desirable to secure the co-operation of all proprietors who have not yet subscribed to the rebate plan both for the benefit of the jobbing trade and as a means of strengthening the adherence of those who are already working under it. We can recognize some defects in the system and some disadvantages in particular instances, but they are inseparable from a measure inaugurated for the general good, and are overbalanced by the benefit to the entire jobbing trade.

J. L. LYONS & Co.

Syracuse, N. Y., Sept. 2, 1893.

We do not hear of more complaints or evasions than at any time heretofore.

We believe the rebate prices are generally maintained in this territory.

We have never heard a desire expressed by any jobber to the effect that he would like to give up the rebate system.

We think most assuredly that all goods sold under the head of proprietary medicines should be placed on the rebate fystem.

Regarding our own expression, would say that we believe under no circumstances should the rebate system be given up. We would raise our voice in favor of a larger discount from manufacturers rather than anything which would tend to reduce our percentage. Owing to the sharpness of competition and expense of conducting a large business, we think manufacturers should allow 15 % in place of 10 % as is usual. It would enable us to conduct our business at a profit and encourage old reliable houses of the country to remain in the business.

Believing that the time will soon come when the manufacturers will do more for the jobbers than they have done in the past, and looking forward to that end, we remain,

COMPRESSED PAINT BRUSHES

THESE NEW BRUSHES are made both full centre and open centre, so that customers may have them in whichever style they prefer. The above illustration is one of the full-centre lines, and the open-centre lines have same external appearance. The sizes of all lines are indicated by the letters A, B, C, D, E, F, the largest size being A.

These brushes will be appreciated by every practical painter who wants brushes absolutely without defect. The bristles are of the best quality, and are securely held by an entirely new mechanical process. Shrinkage is impossible, as the brush-head is entirely of metal. They are guaranteed not to come apart under any usage to which a brush can be put, and shedding bristles is an impossibility, as each bristle is held with a vice-like grip in its place. They will not come apart in water-color, glue, or any other substance in which brushes are used. Their appearance is exceptionally neat, as the metal is nickel plated. "Hold-Fast Bridle Catches attached to every brush.

SATURDAY EVENING, Sept 16, 1893.

White Lead, Zinc, Etc.

White Lead.—During the week under review there has been a better consumptive demand than has been the case for several weeks past. Grinders who have either been shut down or only running on half time have resumed full operations again and have been free buyers of dry lead. Western corroders outside of the combination are pushing their makes, not only here but in the east, and in order to secure contracts for car lots or over are quoting 5¾c, delivered, less the usual discount, with an extra rebate of ¼c per pound for round lots. The general feeling around the trade is that in all probability there will not be any marked activity in the paint trade this fall. The reason assigned for this belief is that the consumers throughout the country have not yet fully recovered from the recent financial depression, and that contemplated outdoor work will be deferred until next spring. Then again the uncertainty of tariff legislation will have more or less effect upon trade in general. Meanwhile dealers will continue to purchase only as daily wants require, and not in anticipation of a "boom" later on. Late schedule of prices is generally adhered to, though there are exceptional cases where competition is sharp they are shaded, specially for round lots of dry. We quote dry, 6c, and lead in oil, 6½c and upwards as to quantity, less the usual discount.

Litharge.—The starting up of a large number of the glass and rubber factories, which have been closed for several months, has not caused any marked demand for spot goods, for the reason that nearly all had full stock on hand or were under contract for this seasons requirements. There has, however, the past few days been rather more inquiry for future delivery, with sales reported of 30 tons at 5½@5¾c, as to quantity, less the usual discount. The other high grades while not active, are beginning to show rather more life, sales are reported of 5 tons at 6½@7c, as to quality and quantity, less the usual discount.

Red Lead.—It is reported that several contracts have been placed during the week on private terms to complete some iron structures which had been stopped, owing to financial matters. German makes are all higher abroad, owing to the drop in the price of silver. For shipments they are asking 6½c for round lots, while for jobbing parcels up to 6¾c is demanded. There has been rather more demand for the domestic makes of this pigment, both for spot and delivery, over the year. Prices remain steady at 6½@7c, as to to quantity and quality, less the usual discount.

Pig Lead.—The advancing tendency in this article has been momentarily checked and the closing quotations range from $3 85@3 90, as to quantity. This is ascribed to the fact that the leading consumers, having purchased ahead on the declining market which existed some time ago, are holding off now in order to influence values, preparatory to renewing their supplies. During the week about 1,000 tons were disposed of. The St. Louis market is firm at $3 70@3 75, and cables from London to-day quote values there at £9 15s per ton, or the equivalent of about 2¼c per lb, making with the duty added, an import cost here of 4¼c.

Orange Mineral.—Owing to the increased demand and the light stock available, prices for French have been advanced to 10½@10¾c, as to quantity and date of delivery. The advance abroad in the price of the various German makes, owing to the drop in the price of silver, has in a measure checked the demand for future shipments, buyers not being inclined to purchase at the figure named unless the duty clause is inserted. For shipments they are asking 7½@7¾c, as to quality and date of shipment, while for jobbing parcels 7½@8c is generally quoted. Domestic makes are meeting with the usual demand at 7½@8c, as to quantity, less the usual discount.

Zincs.—Grinders are drawing more freely upon existing contracts, all of which gives rather more activity to trade. No new contracts are being

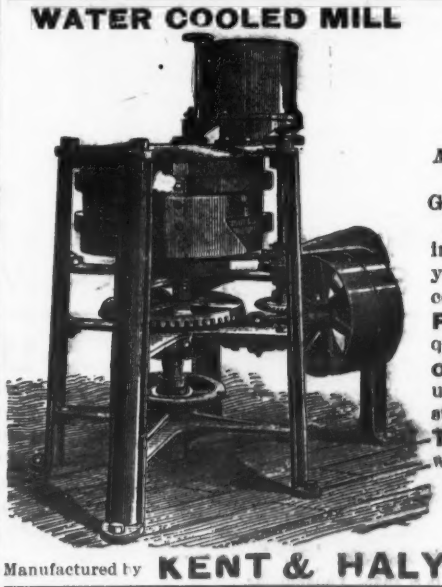
WATER COOLED MILL



FLOOD & CONKLIN CO.,
Varnish Makers.
NEWARK, N. J., June 24, 1893.
Messrs. KENT & HALY,
Brooklyn, N. Y.

GENTLEMEN:

Replying to yours of 22d inst, in reference to the Paint Mills you furnished this Company. I consider them **The Perfect Paint Mill,** producing both quantity and quality, **Superior to any Mill** that has come under my notice, and from my standpoint, any one wanting **The Best** Paint Mill made will do well to adopt them.

Yours truly,
P. F. FLOOD.

Manufactured by **KENT & HALY** 250 & 252 Plymouth St. BROOKLYN, N. Y.

Samuel H. French & Co.

PAINT MANUFACTURERS

"BUCK LEAD"

PHILADELPHIA

made at the moment. It is reported that one of the large companies in the West had closed down on account of slack orders. Prices are unchanged at 4@4¾c. as to quality and quantity. French is without special feature, the usual demand is reported at regular prices.

Dry Colors.

Carmine.—While the market presents a better appearance small lots continue to monopolize attention. Quotations range from $2 75@3 75, as to quantity and style of package.

Carbon Black. — Notwithstanding the demand was principally restricted to small parcels yet the frequency of these orders was greater than for the week preceding. The inquiry was also stronger, though prices were on the basis last reported.

Lampblack.—Small quantities are in moderate request at former prices. The inquiry is somewhat firmer and the general tone steadier.

Ochers. — The movement in this market was as a rule confined to jobbing transactions, though occasionally sales of larger proportions were reported. Quotations are as follows: Rochelle 1¼@1½c and American 1½@1¾c, as to quantity.

Ultramarine.—Small quantities find a consuming outlet at 7@25c, as to grade and quantity.

Vermilion. — Again we record a quiet week for this color. The transactions were of small nature, designed only for current requirements. Values are 57@62c, as to quantity and make.

Paris Green.—Important action in this market has ceased and the only business now reported is for jobbing parcels. As has been before stated the season is practically at an end, and as all available stocks have been exhausted prices may be considered nominal. Small quantities command from 17@21c. The association price is maintained at 10c for bulk, 10¼c for 1,000 lbs, and 10½c for smaller quantities.

Miscellaneous.

Passing this market under review we find no new or distinctive features. Trade has been limited to the filling of small parcel orders with prices as a rule satisfactory.

Barytes.—A little more inquiry has developed, but this has in no way influenced orders which continue to be of moderate size. The quotations of $15@21, however, are still maintained as to quantity.

Chalk.—The stocks of this article are very large and grinders as a rule are overstocked. This has in no manner, however, affected prices as dealers refuse to grant further concessions, preferring to accumulate supplies rather than surrender their entire profits. We quote $1 75@2 as to steamer or sail shipment.

China Clay.—Inquiries for futures are more noticeable than for weeks past. Sales are also larger, although not of unusual size and dealers report a better outlook than for a month past. Steadiness of prices are also a feature, $12@18 being the quotations as to grade and quantity.

Talc.—Dealers report a very quiet week with little or no business of consequence transacted. Values, however, are unabatedly maintained on the range of 1½@1¾c as to grade and size of order.

Mixed Paints.—Important action is still in abeyance, though small sales found a consuming outlet. The unusual quietness at this time does not augur well for the fall season. Prices are as a rule maintained.

Metallic Paints. — Trade in this article was not over brisk and but few lots, other than those on old contracts were moving. Sales of 5 tons were made at $13 75, and a car lot also sold at $14, delivered in New York.

Whiting.—The situation is somewhat brighter, as it is reported that many of the mills that ceased operations during the past month or two are about to resume. This will give impetus to the demand and we may look for a revival of trade conditions in the near future. Values are 45c for commercial, 50@55c for gilders and 60@65c for ex gilders, as to quantity. Round lots are quotably lower.

Varnish Gums.

Continuance of the past dullness is still noticeable in this branch of the paint market. Stocks are ample for all requirements and no additions are expected before next month. The demand has been sluggish, though, as a rule, prices have been uniformly maintained.

Glues.

Complaints are heard at the prevailing dullness, but it is thought that this month will inaugurate a better condition of affairs. Efforts are being made to sell and in some cases concessions are granted, but as a rule former prices are closely adhered to. We quote low grade 8@10c; cabinet, 12@14c; white, 13@15c; ex white, 17@25c. Imported glues are held at 9@12c as to grade; thick gelatines ranging from 18@40c, as to brand, make and size of package.

Glass.

Window Glass.—Buyers are becoming more numerous and their wants are multiplying as the season advances, but with the exception of a slow but steady increase in the consuming demand, there is but little of interest to chronicle. Dealers seem confident that the forward movement which has commenced will grow in volume and that the results of the approaching season will be satisfactory. Prices are being firmly supported.

Plate.—We note a continued unfolding of the demand for consuming requirements and the prospects are favorable for a large distribution during the next few weeks. Quotations meanwhile are unchanged and there is no probability of lower prices. Some of the Western plants are resuming business and in a short time it is presumed that the majority of the American factories will be in operation. During the week delegations from various sections of the country representing the glass industry, were heard before the Ways and Means Committee of the House of Representatives at Washington in reference to the proposed changes in the tariff. Nothing of practical importance, however, has thus far resulted from these discussions.

St. Louis Paint Market.

(Special to the REPORTER.)

White Lead.—Business in this line is improving to a very gratifying extent and the outlook for fall business is brightening. Financial matters are taking on a better aspect, which has due influence in encouraging sales. Card rates continue to govern all sales.

Mixed Paints.—In the mixed paint branch proper trade is still inactive, with but little if any more doing now than for several weeks past. There is quite a nice business in putty and pine tar.

Dry Colors.—There has been a slight change for the better in this branch of the paint trade, and the volume is larger than for several weeks past. So far as known there has been no change in values from those heretofore governing this market.

Pig Lead.—There is not at present so much interest manifested in this metal as last week, and the market in consequence is not in such a strong position. Manufacturers are not seeking for supplies except in a limited way, and general business is of only small proportions. Prices are weakening to some extent and have receded to $3 67½. The movements for the past week were as follows:

RECEIPTS.

Week ending Sept. 9	32,907 pigs
Week ending Sept. 2	20,335 "
Since January 1	962,246 "
Same time last year	1,122,473 "

week. The market in this ore is much stronger, and gives promise of an early advance in values. The lead market is in an advancing position, closing the week at $21 50, being an increase of $3 in the last two weeks. Some apprehension is felt by operators as to what effect on values a sale of 500 tons of zinc ore in the St. Louis market will have. It is claimed that $17 50 per ton was obtained, but this is not likely to create any disturbance or lack of confidence, as the market is almost certain to maintain a firm position, if not an advancing one. Sales for the week are as follows:

	Zinc, lbs.	Lead, lbs.
Webb City.....	992,570	233,530
Joplin.....	911,450	242,970
Aurora.....	839,370	180,100
Galena	559,000	129 000
Miscellaneous ...	840,240	321,560
District total...	4,142,630	1,107,160

Recent Appraisers' Decisions.

COAL-TAR PREPARATIONS — DICHLOROPHTALIC ACID.

In the matter of the protest of Schoellkopf Aniline and Chemical Company, against the decision of the collector of customs at Buffalo as to the rate and amount of duties chargeable on certain dichlorophtalic acid, imported January 9, 1893, the following is the opinion by General Appraiser Lunt.

The merchandise covered by this protest is invoiced as "dichlorophtalic," and was imported at Buffalo, January 9, 1893, by the Schoellkopf Aniline and Chemical Company.

1. Duty was assessed thereon at 20 per cent. ad valorem under paragraph 473, N. T., as an acid used for chemical or manufacturing purposes, not specially provided for in this act.

2. That said merchandise is dichlorophtalic acid and is a coal tar preparation, not a color or dye; that it is a chemical compound and an acid, the chief use and value of which is in its application to the construction of coal tar dyes, by combining the same with other chemicals.

3. That a very large proportion of coal tar colors or dyes and coal tar preparations are acids or possess acid properties.

Following and adopting our observations and conclusions in G. A. 2032 we hold that this acid is specially provided for in paragraph 19, N. T., and overrule the protest.

ABSOLUTE ALCOHOL—FREE AS A SCIENTIFIC PREPARATION.

In the matter of the protest of E. H. Bailey & Co., against the decision of the collector of customs at Philadelphia as to the rate and amount of duties chargeable on certain absolute alcohol, imported March 8, 1893, the following is the opinion by General Appraiser Somerville:

We find the merchandise to be "absolute alcohol," substantially identical in kind with the preparation covered by our decision G. A. 1368, In re Richard Kny & Co. et al.

The article was assessed for duty under paragraph 329 of the new tariff act as distilled spirits and is claimed to be free of duty under paragraph 677 as a "scientific preparation, imported in good faith for the use of a college established for educational, scientific, or literary purposes.

We find that the merchandise was imported not for sale, but in good faith for the use of the Univerity of Pennsylvania, which is an institution established for educational and scientific purposes, and, further, that it is a "scientific preparation" within the meaning of said paragraph 677, as defined in said board decision G. A. 1368, which was affirmed on appeal by the United States circuit court for the southern district of New York (without opinion) on June 18, 1893, per Lacombe, J., and has since been fully acquiesced in by the Treasury Department.

The protest is sustained, the collector's decision reversed, and he is instructed to reliquidate the entry accordingly.

English Petroleum Markets.

London.—There is little of general interest to report in reference to this article, which engages no more attention than it did for a long while before the present time, and there has been nothing new in the questions of supply and demand to create the least stir in the London market. Advices from the other side have been construed as being more favorable for importers, but no immediate effect on the market here has been seen, and sales have progressed at the same slow rate as hitherto. Supplies, as repeatedly mentioned, have continued uninterruptedly large, and as there is no conclusive proof that they do not overtake the wants of consumers and leave a surplus quantity of burning oils to be stored away for an indefinite period, the pressure to sell, so often experienced, naturally leads to an occasional slight reduction in quotations. Although there has been an entire absence of buoyancy in the market during the month just closed, rather extensive operations have nevertheless been concluded, and a flickering improvement in the disposition to buy has now and then been detected by close observers. Quotations, however, have had no very decided tendency, and have generally remained exceedingly low in all positions; those for American refined having been 3⅞@4d on the spot, 4@4⅛d per gal for September-December delivery, 3 11-16@3⅞d for Russian oil, and at 3 15-16@4d for forward contracts for the latter when made early in August. Water white oil has been purchased at 5@6d, bein the same as heretofore, and rectified petroleum spirit has again realized 7@7¼d, but the ordinary kind has been offering on slightly easier terms —6½@7d per gal.

Importations of petroleum oil, &c., (in barrels), into London and the outports during the past eight months, as compared with those in 1892 and 1891, viz:

The imports of residuum this year have been 10,939 barrels into Liverpool, against 2,124 barrels in 1892.

Liverpool.—Imports have been on a liberal scale into the United Kingdom, and the market has remained in a quiet state. The expectation of an improvement in the demand has been partly realized, as within the last week more orders have been booked by the trade than hitherto the case, and it is evident that the reasonable basis at which values are quoted are at length attracting attention. Dealers for future delivery show an increased trade. During the past month quotations have been without alteration, and it is possible that an advance may take place before long. Refined Pennsylvanian moves from 4¾d to 5¼d, according to quality, and Russian refined at 4d.—*Oil Trade Review.*

A Report on Coto Bark.

BY W. ELBORNE, B.A.

The author's communication resulted from inquiries which had been instituted with the object of ascertaining the botanical origin of coto. Genuine coto bark is not often met with in commerce; there is, however, a more frequently occurring bark very analogous in physical appearance and

structure, evidently closely allied botanically to the true coto, and termed "paracoto bark." The latter does not contain the active principal (cotoin) of the true bark, from coto by a chemical analysis. Coto is said to come from and can only be distinguished from Amazonas, paracoto from the banks of the Mapiri, the botanical origin of both being unknown.

A specimen of genuine coto having been sent to Mr. F. F. Newcome, in Bogota, for the purpose of recognition, a reply was received to the effect that the bark had been recognized there as canelo, and was believed to be yielded by a drimys, which latter grew near the coasts of that country (United States of Colombia) and of Venezuela. Upon reference to works on materia medica, it was found that canelo (the Spanish for cinnamon) was a recognized term in Mexico and Chili for Winter's bark (Drimys Winteri). The structure of the latter being essentially different to that of coto, no reliance could on that account be attached to the canelo clue, and it was abandoned. Strange to state, however, a second and totally different line of inquiry terminated in the same perplexing result, viz., Drimys. At the sixty-second meeting of the Dutscher Naturforscher und Aerzte, held at Heidelberg, there was exhibited a collection of fine chemicals and recent rare plant derivitives, among which latter were two specimens labelled "Cotoin" one obtained from Bolivian coto verum, the other from a so-called coto bark that had been received from Venezuela. Specimens of the barks from which these cotoins had been extracted were also exhibited. The author obtained samples both of the cotoins and the barks. The Bolivian coto verum agreed with his specimens of genuine coto, whereas the bark from Venezuela proved to to genuine Winter's bark. The so called cotoin that had thus been obtained from Winter's bark had been submitted to analysis. In melting point and qualitative reactions it agreed with the published reactions for cotoin from true Bolivian coto-bark. A quantitative analysis had been made, when its percentage composition was found to differ from that of true cotoin by about 1 per cent. of carbon, the formula for cotton being $C_{22}H_{18}O_8$, and that of the substance from Winter's bark $C_{21}H_{18}O_8$. These results were sufficiently interesting to warrant an extended investigation of the author, which the author hopes to pursue.

Having applied to the museum department of the Pharmaceutical Society for such information on the subject as might be available, Mr. E. M. Holmes, in reply, furnished an account of various specimens of barks (dated 1851) in the Pereira and Hanbury collections, some of which even at that period had been confounded with Winter's bark, but were in reality genuine coto-bark, only not at that time known under the name of "coto." [The name "coto" for the bark originated in 1873.] Owing to the prevailing opinion that coto is yielded by a lauraceous plant, the author drew attention to the fact that a large tree (*Laurus giganteus*) hitherto unknown to science had quite recently been described in the *Pharmaceutical Journal* by Dr. Bayon, of Bogota. It is a native of a district not far from the coco-yielding region, but its bark does not appear to have yet received attention.

Wants Paint for a Floor

Is that what your customer asks for? Of course he wants paint that will stand use, will dry hard over night, and will not run off and grind to pieces under the boot heels in a day or two. Maybe he asks you to guarantee it. You can't do that with ordinary floor paint. But if you will sell Harrisons'

Floor and Deck Paint

you can safely promise that it will fill all the requirements of the most exacting customer.

Citric Acid from Glucose.

C. Wehmer claims to have prepared citric acid by the fermentation of glucose. He states that the acid is a secretion product of certain moulds, being formed in a manner analogous to that by which glucose is transformed into lactic and acetic acids by the action of bacteria. If saccharine solutions be exposed to the action of the moulds sugar is decomposed, carbonic acid being evolved and an organic acid formed, of which the properties and composition are said to be identical with those of citric acid obtained from lemon juice. According to the author this property is possessed by two species of moulds (moisissures) or filamentous fungi (champignons filamenteux) which have previously escaped observation on account of their resemblance to other well known species. He proposes to term them Citromycetes, the two species being distinguished as pfefferianus and glaber respectively. They are described as forming felt like green tissues, about half a centimeter thick, on the surface of suitable solutions, and as greatly resembling Penicillium, from which they are distinguished with difficulty. Various saccharine fluids, fruits, etc., favor their development, but solutions of glucose constitute the most suitable media, Under proper conditions as to temperature, aeration, etc., it is claimed that citric acid is formed to the extent of more than fifty per cent. of the glucose employed. Eleven kilos. of the sugar yielded six kilos. of pure citric acid in one experiment, without any secondary organic products being formed. The process has been patented.

504,211. Ship's Paint. Filed March 30, 1893. Issued Aug. 29, 1893.

Claim.—A paint compound consisting of hydromagnesite, quicksilver chloride and magnesium chloride and metallic oxide, substantially as herein described.

PURE Linseed Oil

is as necessary in making a good paint as is *Pure* White Lead. The market is full of adulterated oil, and the ruin of a great deal of painting is the result. *Consumers*, to protect themselves, and *dealers*, to protect their trade should buy only brands of oil well known for purity. The old established, "Atlantic" Pure Linseed Oil is always reliable.

OIL MARKET

Note—*Our prices are for large lots except when otherwise specified, and buyers of small quantities must expect to pay an advance on these figures.*

Complete prices current will be found on page 41.

SATURDAY EVENING, Sept. 16, 1898.

The market for oils has not materially changed during the past week. Nearly all the business transacted was of a hand-to-mouth order, and large lots as a rule were avoided. Buyers are keeping closely to their actual requirements, avoiding all speculation, and manufacturers as a rule do not refine any more oil than they see a possibility of prompt disposal. There appears to be a manifestly better feeling in some department but as this was noticed on several occasions before, it may prove only spasmodic. Cottonseed oil is firmer in all positions with linseed oil steady at the late decline. The mineral oils as a whole are dull and easier.

Vegetable Oils.

Linseed.—Early in the week the market was very much demoralized, owing to the attempts of crushers and agents for outside oil to unload their surplus stocks, previous to the meeting of the crushers which was called for Wednesday to discuss the situation and see if steps could not be taken to check the downward tendency of the market and restore confidence once more among the various crushers. Unfortunately the meeting did not materialize, and as it it was indefinately postponed, and from present appearances the prospects of a future meeting are not very bright. As usual when a sudden break occurs buyers withdraw from the market in anticipation of lower prices. Consequently while considerable oil was sold for prompt and and September delivery, the volume of sales was small as none of the crushers would sell for future delivery or book large speculative orders. It was reported, however, that 500 bbls of city oil were sold at 35c, less 3c per gallon for casks to be returned. This was adopting the old style of sale before the recent combination was formed which allowed only 1½c per gallon. A further sale of 1,000 bbls was reported for September delivery at about 35c. There are plenty of orders in the market at prices ranging from 32@34c spot, and at 35c for delivery over the balance of the year, buyers' option. These have been declined, as at present price of seed it is claimed that oil cannot be crushed at a profit. The market closes at 37c nominal for city, and 36c for independent makes outside the National company.

Cottonseed.—The firmness noted at the close of our last was augmented on Monday, when several large orders for export came to hand for both prime summer white and off grades of summer yellow oil. The light stocks of the latter available for prompt delivery made it almost impossible for exporters to secure a sufficient quantity to fill their orders. The reports from the South all indicate crop prospects as being very unfavorable, and for the time being nearly all the mills have withdrawn their quotations for new oil. The West has been a free buyer of new crude for October delivery, at prices ranging from 26@28c loose at mills, the sales aggregating 6,000 bbls. At the close 30c was nominally quoted with 29c bid. On 'Change Friday 34c was freely bid for 300 or 500 bbls of prime new crude, October delivery here, without takers. The sales which we have been able to gather are as follows: 500 bbls prime summer yellow at 35c. 100 bbls do at 35½c, 300 bbls do at 36c, 200 bbls do at 36c, 300 bbls do at 37c, 250 bbls do at 37½c, 500 bbls do at 38c, and 300 bbls do at 38c; also 500 bbls do at 38½c, 800 bbls of off summer yellow for export at 34c, 400 bbls of choice summer white for export at 42c, and a further lot of 200 bbls was taken at 43c. At the close 43c was freely bid for further lots for export but 44c was lowest price acceptable. Soap stock is lower with sales of 30 bbls reported at 1½c, and 50 bbls in lots at 1¼c. Our New Orleans corresponeent wires us as follows: "Crude oil firm, 26c bid loose here, more inquiries than offers, buyers wanting oil even into December. No change in cake and meal." The market closes very firm, with the tendency upward for the next few weeks, pending the appearance of the new crop. Some of the more conservative dealers are inclined to think this boom in prices is premature and that in November we will see a drop in prices under pressure to sell the large stocks of oil, as these high figures will naturally stimulate mills to run to their full capacity. We quote prime summer yellow, 39@40c; off yellow, 36@37c, as to quality; off crude, 28@30c, as to quality; new crude, 30c, nominal loose at mills; summer white, 44c.

Messrs. Hopkins, Dwight & Co., in their weekly review of the market say: "Our cottonseed oil market closed last week dull and depressed with a small demand and prices showing a material decline, prime summer yellow having sold at 34@35c, off yellow at 30@33c. The crude oil market is nominal because there is no stock. There has been a surprising change in the tone of the market this week and prices gradually advanced as more confidence developed itself and a better inquiry was manifested. The foreign markets have improved to some extent, but the principal cause of the advance has been the very free buying of oil in Texas to go West at prices showing a material improvement. The week closes with the mills offering little oil, although we understand 27@28c has been bid from the West for prime crude September-October, f.o.b. mills at Texas points. 34c has been bid here to-day for prime October delivery. There has been a large business done at the West in crude oil at these prices, and it is believed that some liberal sales have also been made here at about these figures. Prime S Y sold early in the week at 36c, but has gradually appreciated in value and 38½c has been paid to-day. The stock of off oils in first hands has been practically exhausted, also the stock of crude, and what little business is done in these grades is in jobbing lots at relatively full figures. There is no eager desire to buy at this advance, many people feeling that we may see the market recede as soon as receipts of new oil show themselves. It is evident, however, from advices from the South that the prospects for good oil have been materially lessened in the last fortnight, especially in the Atlantic States, by continuous rains affecting the quality of cotton, and probably the same effect upon the quality

of seed and oil. At any rate, the mills are offering practically nothing from this quarter. We are also advised from Texas that nearly all the mills have sold for thirty days ahead and are unwilling to make any further offers at present owing to the poor prospects for seed and small receipts. We quote prime s-y 38½@40c, off yellow at 32@35c no stock, prime white 43@45c; prime crude, 33@35c, nominal, no stock, 34c bid for prime crude October delivery, off crude nominal at 27½@30c. The sales have been sufficiently large during the past fortnight to materially reduce the stock of yellow oil, so that practically the trade enters the new season bare of supplies, while there is no prospect of early arrivals of new oil at present. The monetary difficulties that have prevailed throughout the country have delayed the marketing of cotton and the marketing of seed and the ability of mills to finance for purchases of seed and thus curtail the early crush. Unless the weather improves so that October cotton can be picked under favorable conditions the prospect next season is good for a small crop of prime goods and a large proportion of the total crush may be of off grade and oils made from seed more or less damaged by the unfavorable weather in which it has been gathered. With a firm lard market and probable good demand from that quarter for prime goods the prospect as to the price for prime oils is materially changed for the present."

Cocoanut Oil, &c.

Ceylon.—The non-arrival of the Anamba with about 700 tons is now causing some anxiety to those who have been depending upon the arrival of this vessel to supply their current wants. The Sea Witch just to hand only brings about 150 tons, the bulk of which it is reported will go direct into consumption. There have been several small sales of spot oil at 5⅝@5¾c, as to quantity, holder and style of package. Cochin oil does not show much life, still small lots of 5 and 10 tons are being sold from dock at 6¼c. For store parcels they are quoting 6⅝@6¾c, as to quantity and holder.

Olive.—The demand for spot goods has slacked off to a considerable extent during the past week, buyers generally only taking small lots to meet their daily wants, and these are supplied at 59@60c, as to quantity and holder. Near-by arrivals and October-November shipments are held at 58c, shipments of new crop for January forward are quoted at 55c, with bids solicited. Olive foots on the spot are quoted by first hands at 5c, but from outside holders who are anxious to sell it is reported that 4½c is named for a round lot. Shipments over balance of the year are quoted at 4¾c. For new crop 4½c is asked.

Animal and Fish Oils.

Cod Oil.—The reports from fishing districts continue poor. There is considerable oil, however, in fishermen's hands awaiting an active demand, but as important action has ceased to be a feature and the competition of other similar oils so strong, it is doubtful whether this oil will be in movement for some time to come. Small sales have been made, however, on the former range of prices.

Lard Oil.—Continuance of the past quietness remains the features of this market. The past dullness has reduced orders to the minimum, and only small jobbing parcels were in transit. The situation in most branches of the oil department show signs of improvement, but apparently this better and stronger feeling has not as yet become manifest in this market. Values for the prime grades continue on the range of 67@68c, the off-grade oils remaining in about the same position as when last reviewed.

Menhaden Oil.—This market evinces more signs of activity than it has for weeks past. Sales of 2,000 barrels northern oil were transacted on the regular range of prices. A few smaller lots were also disposed of. The supplies of this oil are fast becoming depleted, and as additions to it are slowly made and of small quantity it is doubtful whether there will be sufficient for the requirements of fall and winter consumption. Quotations are; Brown strained, 38@39c; light strained, 39@40c; bleached winter, 43c; extra bleached winter white, 46c. as to quantity.

Red Oils.—Ordinary distribution still continues, but important action is in abeyance. This lack of demand, however, has not seriously affected prices, they continuing on the range of 4½@4¾c for saponified as to quantity.

Sperm Oil—The crude sperm oil market has been quite active during the past week, with sales of 300 bbls inferior oil on private terms; also 500 bbls merchantable reported at 65c, for manufacture. Most of the oil now in first hands has been stored and holders continue to firmly demand 70c. Manufactured oils were in light request at the following prices: Natural winter 85@87c, bleached winter 90@92c, natural spring 79@81c, bleached spring 84@86c.

Whale Oil.—In the crude whale oil market a single sale of 60 bbls northern oil for manufacture was reported at 40c. Holders for the most part are not pressing their oils on the market, preferring to wait a more active demand. In the local market, apart from the average distribution incidental to a week's business, no movement was observed. Values are 48c for natural winter, 47c for natural spring, 51c for bleached winter and 53c for ex-bleached winter, as to quantity and seller.

Mineral Oils

The general market for mineral oils has been quiet during the past week with a moderate distribution composed of jobbing parcels for consumptive requirements. In the absence of important action values are more or less nominal.

Black Oils.—Jobbing parcels were in moderate request, but orders for large quantities were neglected. Values, however, are unabatedly held on the basis of former quotations.

Filtered Oils.—Indifference on the part of buyers continues and as there was no disposition shown by sellers to realize during the past week, the market wore a quiet appearance.

Cylinder Stocks.—Again we record an uneventful week. The volume of transactions did not exceed that of former weeks. The inquiry for future supplies was indifferent, with prices as last reported.

Wax, Lard, Tallow, &c.

Paraffine Wax—Crude is quoted at 3¾@4c for 124@126° test. The inquiry during the past week was somewhat stronger for export, but for local requirements but little interest was manifested. The exports as given by the government table show a marked increase over former corresponding periods evidencing that the demand for wax for foreign manufacture is yearly increasing. Refined was in moderate request, and considerable was done in a jobbing way. We quote 135° at 8c, 130° at 7¾c, and 125° at 6¾c.

Lard.—This market was firmer and higher, with more active trading than for the preceding week. Western was nominally 9@9 10c, with sales at the inside figure to refiners. City was in less urgent demand with 8¾c bid and 8⅞c asked. Refined sold in a moderate way at 9 70c for continent and 10c for South America.

Stearine.—This market was inactive for lard at 11¼c. Oleo was in good demand and sales were made at 11½c. Oleo oil was in better request than for some time past, and prime grades were commanding remunerative prices.

Tallow.—A more active demand, easily satisfied, was the characteristic feature of this market. Sales of small quantities were frequently transacted both for local and out-of-town consumption, on the basis of 4⅞c. Some special grades were commanding higher values, but were in less urgent demand.

Oil Cake, Meal, Etc.

Linseed Cake.—The market for oil cake was in somewhat better condition and a good distribution for export was reported. The quotations now ruling range from $25 50@26, as to seller.

Chicago Oil Market.

[Special to the REPORTER.]

Linseed Oil.—Only such sales as are dictated by necessity are reported upon a market which, if not positively falling, at least verges upon uncertainty. Linseed oil is nominally quotable at 38c, and this is the figure of the National Company, and of some of the independent crushers. There are, however, rumors of lower offerings but no sales are reported at less than 38c. The outlook for sales is not specially bright, and the course of prices is as yet uncertain.

Flaxseed.—The period under review has been marked by considerable increased activity in both movement and sales, as is fully shown in the detailed statements set forth below. A comparative view of the total movement for the past six days is shown in the annexed summary:

	Receipts.	
Week ending	1893.	1892.
Sept. 13	319,548	160,630
Sept. 6	50,889	217,914
Aug. 30	147,724	190,115
	Shipments.	
Week ending	1893.	1892.
Sept. 13	144,067	200,136
Sept. 6	56,217	273,439
Aug. 30	145 285	268,422

The bulletin of the registrar showed an increase in the supply in public elevators and bins and in special bins amounting to 48,658 bushels. This week's percentage of flax grading below No. 1 was 4 3-10; that for a year ago, 3 2-10 per cent. Special bin stocks decreased 697 bushels only. As compared with a year ago stocks (all around) are 1,968,442 bushels less, or in the ratio of one to eleven. Another factor in the existing situation which ought not to be ignored is the disparity between the quantity of seed carried by crushers at the present time and a year ago. The receptacles of local mills are comparatively empty of flax, while twelve months since some of them were filled to their utmost capacity. The subjoined table shows the amount of flaxseed in regular elevators and special bins in Chicago, by grades, for the dates indicated;

Grade.	Sept. 11. 1893.	Sept. 4. 1893.	Sept. 12. 1892.
No. 1	189,068	140,355	2,034,159
Rejected	8,065	7,427	57,279
No grade	609	600	11,026
Reg. stocks	197,742	148,391	2,102,464
Special bins	1,506	2,203	65,226
Total	199,248	150,594	2,167,690

The official figures of the inspector exhibit an increase in arrivals which has been as marked as it was unexpected. Most of the seed coming in is of the new Northwestern crop, and is of excellent quality as may be seen from an examination of the appended tables, which affords data for comparison. The figures given have reference to cars:

Week ending	No. 1.	Rejected.	No grade.	Total.
Sept. 13	632	15	7	654
Sept. 6	322	18	5	345
August 30	189	8	4	201

The inspector reports an outward movement decidedly more brisk than that for several weeks preceding. This is partially due to frequent, but guarded purchases by brokers representing eastern mills. Exporters have also been favored by a decline in ocean freights, and inquiry was noticeable from that quarter until prices seemed to get a trifle in advance of their limit. There has been considerable vessel-room engaged, and the quantity of seed "billed through" or "not to be inspected" continues large. The following tabular statement is condensed from the official postings of flax "inspected out" (or withdrawn after inspection) for the past three weeks. The figures are given in bushels:

Week ending	No. 1.	Rejected.	Total.
Sept. 13	131,961	....	131,961
Sept. 6.	36,626	....	36,626
Aug. 30.	76,695	1,400	78 095

The seed moving from this point without inspection together with the total outward movement, is shown in the annexed statement:

Week ending.	Actual withdrawals.	Not inspected.	Total outward movement.
Sept. 13.	131,961	29,350	152,311
Sept. 6.	36,626	18,700	55,326
Aug. 30.	76,695	18,700	45,395

The past week has witnessed, besides a limited but higher range of values, considerable activity among buyers, for both cash seed and future deliveries. Seed on track was in fairly good request, and for the first time in several weeks there was a demand for flax from store. Northwestern seed was at a premium, and f. o. b. northwestern flax from store brought 1c better than ordinary quotations. Just as outside quotations were reached there came reports that the northwestern crop had been practically harvested, and that farmers were marketing it as rapidly as possible. This rumor, together with the break in oil, rather tended to depress prices. Crop estimates confirm previous advices, and the tendency in the northwest has been to sell at the outside, even if the selling orders should break the market. Reported sales on 'Change have aggregated 491 cars and 29,000 bushels (besides 50 bags) of No. 1, 8 cars of rejected and 2 of no grade—some 545 cars in all. Opening at $1 03, cash No. 1 dropped to $1, and after recovery fell to $1 01, closing at $1 04. This week's range has been $1@1 04. Lower grades sold by sample at 94@99c, according to quality. Market values for future delivery seemed to be somewhat affected by rather liberal selling orders. One fact seems to be tolerably well assured—the crop will fall considerably below the aggregate capacity of American mills, but will probably be about equal to consumptive requirements. In the speculative market, October delivery has been the focus of attraction. Of this option sales have aggregated 203,000 bushels. Prices have ranged between $1 01 and $1 03. September has sold sparingly, buyers displaying considerable caution. The volume of sales reported has not exceeded 1 car and 10,000 bushels at $1 02½@1 03½. November seed also attracted notice, transactions in this future having reached 5,000 bushels at $1 02@1 02½. A little December (61,000 bushels) brought $1 04@1 06. To day's market was somewhat unsettled, although preference was manifested for seed arriving on certain lines. Buyers, however, demurred to the payment of premiums which they regarded as exorbitant. No. 1 ranged from $1 03@1 03½, with a preponderance of sales at the outside, the market closing with $1 03¼ bid for the less desirable locations. Rejected sold sparingly at $1 00½. Speculative trading was limited. For September $1 03 was bid, but at this there were no sellers. October sold a $1 03½. For December $1 06 was bi

and a little was sold at ⅛c better. Receipts fell off and the output appreciated.

Oil Cake.—The situation remains practically unchanged. There seems to be a derth of bids for export, and it is not east to say just what this market is. Probably $21@21 50 would approximate the net value, in Chicago, of the scattering bids heard. For some reason foreign buyers seem to be able to struggle along without American cake, the exportation from Chicago for the first seven months of 1893 having aggregated only about 3,200 tons, as against 9,000 tons during the same period of 1892. Meal is fairly active at unchanged quotations —$24.

Oleo Oil.—The Holland oleo market has shown less activity this week, but more strength, fancy grades having advanced to 65fl. This is attributable to an increased inquiry for margarine, which in turn is to be ascribed to a scarcity of natural butter in England. Sales, however, have been only fairly liberal, transactions for the period under review being estimated at but 4,200 tierces. Exports continue light, those for the week having aggregated about 3,300 tierces. The latest cables received indicate a continuance of the firm feeling, with some symptoms of a yet further appreciation in values, should exporters from this side be so moderate as to prevent an accumulation of stocks at Rotterdam.

Lard Oil.—The market for lard has generally ruled strong, with a fair inquiry for cash lots, but only moderate trading in speculative deliveries. The first transaction of the season in "year" lard was made this week at $7 75, or from 50@75c under cash. Cash lard is scarce, offerings being very light and the demand brisk. The options chiefly in request have been September, October and January, all which have ruled higher. September closes at about $8 50, October $8 50@8 60, and January at $7 70@7 75. To-day's sales of cash lard were mainly of "loose," values ranging from $8 27½@8 50. Oleo stearine continues to advance. To-day's market is strong and favorable to holders, the quotable price being about 12c. All grades are quiet and rather easy, yet quotably unchanged. White is held at 4½@5c; yellow at 3¾@4c, and brown at 3¼@3½c. Current quotations for lard oil for all grades of which the consumptive inquiry is rather quiet —are about as follows: Extra, 65c; extra No. 1, 50c; No. 1, 35@37c; No. 2, 32@34c.

Neatsfoot Oil.— The consumption remains only normal, or, in other words, restricted. Buyers are indifferent, but limited production produces firmness on the part of sellers. Quotations this week exhibit no change, pure being still offered at 50c, while first-rate No. 1 is purchasable at 40c.

Tallow Oil.—There is a fair demand for tallow and nominal quotations are a trifle higher. Prices for the various grades in this market are about as follows: No. 1 packers' 5@5⅛c, No. 2 packers' 4¾@4⅞c, No. 1 country about the same as No. 2 packers' and No. 2 country offered at 3¾@4c, with reported sales chiefly at the inside. The inquiry for tallow oil does not, in any degree, exceed the normal average of the season, yet there is moderate consumption at 45c.

(*For St. Louis and Boston Oil Markets see page 34.*)

NAVAL STORES

Note—*Our prices are for large lots except when otherwise specified, and buyers of small quantities must expect to pay an advance on these figures.*

Complete prices current will be found on page 41.

SATURDAY EVENING, Sept. 16, 1893

Spirits Turpentine.—There still continues an absence of important demand, although values influenced by the unsettled condition of the primary market have advanced to 28c for regulars, and 28½c for machine barrels. The Savannah market opened on Thursday at 26c, but there was a very indifferent interest shown by buyers and no sales were accomplished. At the close 25½c was bulletined for regulars with sales of 500 casks.

Rosins.—The market for the different grades of rosins was much drmer and prices, owing to a fair demand and small stocks, were materially advanced. Arrangements have been consumated whereby the shipment of rosins can be promptly made, but as the work of resampling is slow, it may take some time before a settled condition again prevails. Savannah advises an advancing market with a continuance of a good demand. Sales on Thursday amounted to 2,500 barrels. We quote prices locally as follows: Common $1 10, good strained $1 12, E $1 20@1 25, F $1 45@1 50, G $1 50@1 60, H $1 60@1 70, I $1 90, K $2 50, M $2 70, N $3 60, W G $4 00, W W, $4 25.

The statistical position of naval stores in New York for week ending Sept. 16, 1893, as given by Messrs. Geo. L. Hammond & Co., was as follows:

Recent Patents.

504,064. Manufacture of Varnish. Filed Jan. 13, 1893. Issued Aug. 29, 1893.

Claim.—1. The process of making a cleared shellac solution herein described, consisting in dissolving the shellac in an alcoholic solvent, adding a solvent of the soluble impurities immiscible with the alcoholic solvent, subjecting the compound to a temperature of not less than 30° C., and separating the alcoholic solution from the compound, as and for the purpose set forth.

The process of producing pure, clear and concentrated solutions of shellac consisting of dissolving the shellac in any alcoholic solvent thereof, then adding to the solution a solvent of the soluble impurities of the shellac immiscible with the alcoholic solvent, permitting the compound to stand at a temperature not lower than 30° C., until the liquids have separated, and then drawing off the alcoholic solution, substantially as described.

SPECIALS OR NOTICES *in this column are at the rate of Two Dollars for each insertion—for eight lines or less. All over eight lines Twenty-five cents per line of about six words. The full amount in cash must accompany all orders*

TRAVELING SALESMEN

Of all kinds can hear of something to their advantage by sending business card and address to O. O. O'BRIEN, care of this paper.

ELECTRICAL FIXTURES.

A lot of electric light stands, sockets and shades for sale cheap; in use only a short time; can be seen at the office of this paper. 72 William Street, N. Y.

CAPITALISTS ATTENTION.

I am authorized by the owner of well paying petroleum wells situated in a prosperous Spanish American Republic to negotiate for capital to extend, or bond or sell same. By judicious investment, output can be increased tenfold and made a powerful competitor in the Pacific Coast petroleum trade, also to China, Japan, India and Australia. Experts consider extension of fields equal to those of Pennsylvania. For further details address, W. E. VON JOHANNSEN, Commission Merchant, 220 California street, San Francisco, Cal.

VARNISH SALESMEN

of experience, with established trade can secure good positions with a representative house; reference required; communications received in strictest confidence. Address "VARNISH," care of this paper.

FOR SALE.

Thirty-two graded lots in one or more tracts; well located for factories or mechanics' houses. Also brick varnish factory with wooden extension 200X35, with two 80 h. p. boilers; all in first-class condition. Apply on the premises of the owner, Chestnut, Jefferson and Malvern streets, Newark N. J. Factory with ground enclosed 200X110 ft., with more adjacent land if required. The whole tract is bounded by three streets, with sewer, gas and water available, and about 400 x225 ft. ARTHUR W. PALMER & CO

FOR SALE.

One 22 in. French buhr stone paint mill, one 18in. iron paint mill, and one 8 in. iron paint mill (power) for grinding paint samples; all of the above are new mills, guaranteed to be in excellent condition, and will be sold at very reasonable prices. Address WALTER S. HILL, P. O. Box 1819, Boston, Mass.

DRUG BUSINESS FOR SALE.

Owing to the death of one of the proprietors, the executors offer for sale one of the oldest and most prosperous drug establishments in the South; the business is in the best possible condition and is annually increasing in volume, and can be purchased in its entirety, or an arrangement can be made with the surviving partner; the wholesale and retail features are combined in its conduct. For full particulars address "DRUG BUSINESS" P. O. Box 247, New York City.

WANTED.

A large chemical factory wants an energetic pushing representative in Chicago; must be well acquainted with the wholesale drug and grocery trade. Address with references "D. L. E.," care of this paper.

WANTED.

German chemist of twelve years experience is open for an engagement; first-class testimonials; 6 years in this country; now in Europe; thoroughly trained, theoretically and practically. Address "CHEMIST" P. O. Box 233, Boston, Mass.

YOUNG MAN WITH $5,000 CAN SEcure salaried position and good interest in best patent medicine on the market; fullest investigation desired; sales now about 200 gross annually; merit and profit unequalled; capital to be used to introduce article to every druggist in the United States, upon new plan highly endorsed by advertising men. Address "KING" care of this paper.

$6,000 FOR $4,000.

One of the best drug stores in Erie, Pa., will be sold for the above price; clean stock; good trade; full prices for all patent medicines and everything else; trade all cash; store on the main street and on the right side for business. Address for particulars GRACE LYONS, 1120 State St., Erie, Pa.

STRAIGHT TANKS

Salesmen and intending purchasers of Tanks should recognize the fact that there are GRADES of these goods and details of construction nearly as various as in Oils and Paints. Prices of Straight Tanks are influenced by:

1.—MATERIAL—Weight, kind, quality.
2.—SEAMS—Riveted, double-seamed, or neither.
3.—SHAPE—Round or square, high or low.
4.—WOOD BOTTOM—Single, double, or none.
5.—TOP—With screw, 1-2 open, loose cover or wood.
6.—OUTLET—Brass Faucet or Gate, what size and make.
7.—FINISH—Painted, color, lettered or plain.
8.—CONSTRUCTION—Best workmanship or slop job.

THE QUALITY FITS THE PRICE.

Tanks with glass tube indicators made to order. We make to order any sized Tank up to 3,000 gallons.

RULE FOR ASCERTAINING CAPACITY.

ROUND TANKS.—Square the diameter in inches, and multiply by the height in inches, and product by .34 point of four decimals, and the result is in gallons and fractions. . . . . $\frac{34\ H\ D^2}{10000}$=G

SQUARE TANKS.—Divide the product of the height, length, and width in inches by 231, and the result is in gallons and fractions. . . . . $\frac{H\ L\ W}{231}$=G

PETROLEUM MARKET.

SATURDAY NOON, Sept. 16, 1893.

The week opened with a slight rebound from the figure reached last Saturday, anything beyond 65c having proved to be more than could be sustained. The course of the market during the entire week has been downward, but there was no effort on the part of operators to bring this about, the market merely sagging off for want of additional support. The bullish pipe line report having spent its force the price could not be kept up without support from the fields, and the reports from that source being rather bearish in its tenor caused the market to give way. Trading has been very light, although the few operators who may still be seen about the bdll ring, irrigating the sawdust therein, evinced rather more than ordinary interest. The principal feature of interest the past week has been the pipe line report, which is discussed in our editorial columns, and the usual extended tabulated statistics of runs, deliveries and stocks will be found on another page. The general opinion appears to be that the statistics fully warrant the advance gained on Saturday last, but the market is peculiarly sensitive to reports from the producing fields. A synopsis of the reports of the three principal pipe lines is appended;

National Transit Co.	July.	August.
Outstanding certificates...	5,580,000	5,338,000
Credit balances.....	4,374,433	4,223,773

The transactions during the last week show a decrease from those of the previous week, the sales footing up 13,000 bbls against 17,000 bbls for the preceding week. The clearances of the local exchange amounted to 0,000 bbls against 24,000 bbls during the preceding week. The total clearances reported for the Oil City exchange amounted to 504,000 bbls, against 364,000 bbls for preceding week. The highest price of the week was recorded on Monday, when 65c was reached. The lowest point of the week was 64c, and was touched on Thursday. The opening price last Monday was 65c, and the close this noon was at 64c, showing a loss of 1c as a result of the week's trading, while the extreme range of fluctuations for the week was 1c. The range during the corresponding week last year was 53⅞@55⅝c.

Following is given the opening, highest, lowest and closing figures for each day, in tabulated form for comparison:

National Transit.	Opening.	Highest.	Lowest.	Closing.
Monday.....	65	65	64¾	64¾
Tuesday.....	64¾	64¾	64¾	64¾
Wednesday.....	64½	64½	64½	64½

REFINED AND PRODUCTS.

The past week has again been a busy one with exporters of refined petroleum, the requirements of the bulk vessels on this side having been large and there being a good demand for barreled oil, which brought the total engagements to over 200,000 barrels. This steady demand for export does not confirm the report in a foreign exchange to the effect that the storage capacity of the English and continental markets have latterly been taxed to their utmost to store our overproduction. The facts are that vessels have at times been compelled to wait for their cargoes, the demand being really in excess of the capacity of the refineries, while if the storage capacity were taxed to its utmost there certainly would be no urgent demand for further supplies. The price of barreled oil has remained unchanged at 5·15c for New York loading, and 5 10c for Philadelphia loading. Bulk oil has also been steady to 2·65c. The principal foreign markets are steady. To-day's quotations by cable were: Antwerp, 11⅝f; Bremen, 4·60m; London, 4d, and Liverpool, 4@4¼d. Freight rates are steady at 2s@2s 3d hence to London, and 2s@3s to Continental ports, as to port and vessel. Home trade lots have been in fair request and are firmer on the basis of 7⅝@7⅞c for 150° water white, and Western at 7⅛@7¼c

Cases for export have been in active request, and sales of over 500,000 are reported. The price for plain tops has been steady at 5·90c. Freight rates are steady. The nominal rates for large vessels are: For Java, 17½@20c; Japan, 19@22c; Yokohama, 22@23c; Calcutta, 15@17c; Smyrna, 22@23c; Bombay, 16@17c; Rangoon, 16@17c; Singapore, 19@20c; Hong Kong, 18@19c, and for Shanghae, 23@24c; Penang, 19@20c.

Crude for export has been in fair request, and sales of about 10,000 bbls are reported. Washington crude is quoted at 5·40 in bbls and 2·80c in bulk. Cases for export have been neglected, and no sales are reported.

Prime city naphtha has remained unchanged at 5·50c. For export no sales are reported.

Western residuum is nominally quoted at 2⅝@2¾c in bulk at refineries. Barrels are quoted at 5@5¼c. Lima residuum is offered at 4¾@5c in barrels.

CHARTERS FOR THE WEEK.

The total charters for refined in barrels and cases, crude in barrels and cases, naphtha, &c., during the week ending September 15, and from January 1, were as follows:

	Week.	Year.	1892.
Refined, bbls.....	225,500	6,010,500	5 108,500
Refined, cs.....	541,000	18,458,000	10,359 500
Crude, bbls.....	9,500	1,147,400	1,216,500
Crude, cs.....	....	115,000	220,000
Naphtha, bbls.....	....	152,800	150,000
Residuum, bbls...	....	5,000	....
Lubricating, bbls..	....	28,700	78,800
Barrels, cde eq....	534,642	16,786.197	13,090,177

CLEARANCES FOR THE WEEK.

During the week ending Sept. 15, and since Jan. 1, the clearances of petroleum, in gallons, from the port of New York were as follows:

	Week.	Year.	1892.
Refined.....	12,415,098	306,926,847	253,596,128
Crude.....	137,230	5,924,645	18 882,917
Naphtha	392,415	6,730,465	8,029,554
Residuum.....	....	251,400	130,926

EXPORT STATISTICS

The following table shows the total exports from the port of New York and from the United States, reduced to crude equivalent, in gallons, for the week ending Sept. 15; also total shipments to date, with comparisons with 1892:

From N. Y. for week ending Sept. 15..	16,690,694
Total from N. Y. from Jan. 1, 1893....	422,325,627
Same period last year.....	356,675,672
Increase.....	65,549,955
From U. S. for week ending Sept. 15.	21,249,291
Total from U. S. from Jan. 1, 1893....	698,575,302
Same period last year.....	563,331,061
Increase.....	135,244,241

TOTAL EXPORTS FROM DIFFERENT PORTS.

	1893.	1892
New York.....	422,325,627	356,675,672
Philadelphia.....	250,902,529	193,263,108
Baltimore.....	23,505,956	11,518,858
Boston.....	1,393,120	1,612,194
San Francisco.....	228,990	246,229
Grand total.....	698,375,302	563,331,061

CAPACITY OF VESSELS LOADING.

The following table gives the capacity of the vessels loading petroleum at the ports of New York and Philadelphia, on September 15:

	NEW YORK.		PHILADELPHIA.	
	Bbls.	Cases.	Bbls.	Cases.
Refined.....	170,300	1,510,000	66,400	405,000
Crude.....	....	....	25,000	....
Naphtha.....	6,000	....	....	....

FORMALIN
(Trade Mark.)

Schering & Glatz, Maiden Lane, New York
Sole Representatives in the United States for the
Chemische Fabrik auf Actien vormals E. Schering in Berlin, Germany

The New Harmless Germicide
Has a germicidal action superior to Corrosive Sublimate without its toxicity.
This Liquid Mixes in all Proportions with Water
At ordinary temperature even. FORMALIN gives off Gaseous Formic Aldehyd, and the evolution of Gas is, of course, accelerated by application of heat.
Drs. J. STAHL, BERLIOZ and FRILLAT, found that ANTHRAX BACILLI were killed by a solution of 1:50,000, while Aaronson stated that solutions of 1:20.000 prevented the development of Typhus and Anthrax Bacilli, as well as that of Staphylococcus Pyogenes Aureus. Dr. J. STAHL'S observations showed that after one hour's exposure to one per mille, or a quarter of an hour's exposure to a 1¼ per mille solution of FORMALIN, the most resistant forms of micro-organisms were destroyed. FORMALIN, therefore, is equal at least in germicidal power to Corrosive Sublimate, and, under certain conditions, superior when Albuminoid Solutions are present. FORMALIN may be applied in 1% solutions, by Spray Diffusers, without damage to Furniture, Metal or Materials. FORMALIN is supplied in one pound bottles.

BELLE OF NELSON WHISKEY

Druggists who want an absolutely pure and fine article of Kentucky Bourbon or Rye Whiskey can secure it in the

BELLE OF NELSON

Our claim that it is an old time hand made sour mash whiskey, distilled in the mountains of Kentuckyas whiskey was fifty years ago, i.e., boiled in wood and slowly doubled over an open wood fire mashed by hand in smal tubs, and that it is distilled from cold Spring water can be verified by addressing Col. Albert Scott, Collector of Internal Revenue, Louisville, Ky.

The public expect this character of whiskey from druggists—the opportunity is here presented to obtain it. Will sell in lots of 25 to 100 barrels Spring, 1892. 60c; Spring, 1891, 70c; Spring, 1890, 80c, in bond on four months' time.

Our Whiskey is the afinest, the purest, and only a few cents per gallon more than other brands. Give to your ustomers,nd the sick and suffering who buy of them wi'l rise and call you blessed. Address

Drug Market.

(*Continued from page 39.*)

Seed of the new crop is reaching European markets in considerable quantities from Turkey, and quotations there show an inclination to recede. Holders of old seed abroad are manifesting some anxiety to realize on their goods, but are are experiencing some trouble in carrying their desires into effect. The Turkish crop this year is reported to be reasonably large but the Morocco production is said to be below the average.

Caraway.—This seed is held firmly in view of the situation on the other side and a fair inquiry here. On passing busines, dealers are in most instances exacting 7¼c as a minimum figure, but some holders are still willing to accept 7c.

Celery.—No new features have developed in celery seed. The demand is momentarily moderate and 11@11½c is quoted.

Hemp.—Advices from abroad represent a virtual exhaustion of old crop stocks there and no reinforcements of importance are looked for before about November. Russian seed is firm at 2¾@3c, as to quantity.

Mustard.—The consuming demand continues to improve and a large jobbing business is reported in most of the leading descriptions, at satisfactory prices. There are low quotations to be met with, however, and the dealers making these offers claim to be prepared to fill orders. For instance, we hear of round lots of spot California Trieste selling at 3⅞c and new crop of the same variety to arrive offered at 3⅝@3¾c. Yellow California seed to arrive is quoted, in instances, at 3¾@4c in quantities, either by steamer or sail. Bari brown, owing to the cheapness of California seed, may be purchased down to 5½c.

Rape.—The new crop German rape seed is held to arrive by some operators at 3⅛@3¼c, and on this basis considerable interest has been displayed by purchasers.

Shellac.

The market retains the general features named in our report last week. Prices are being firmly maintained on all marks and it is said that the intermediate grades are in comparatively light supply. The sales during the week averaged about 350 cases and the demand continues active. Bleached shellac has been advanced to 30@31c, as to quantity.

St. Louis Oil Market.

[Special to the REPORTER.]

Linseed Oil.—While a better feeling pervades the market in linseed oils and a canvass of the trade develops the belief in most quarters that prices have at last touched bottom, there is no denying the fact that there are still disturbing elements at work that may terminate in still another receding from present quotations of 38c. Some speculators are offering oil at a considerable discount owing to a desire to unload and whether or not this latter class of holders can control sufficient oil and influence to weaken the market remains to be seen. Inquiries for quantity lots are more frequent now than for several weeks, and the volume of business transacted is of goodly size.

Flaxseed.—This market is advancing under a heavier demand, there being an increase in price from 97c, at which it closed last week, to 99c at the moment, with an upward tendency. Receipts for the week were 18,700 bushels, making total to date 224,550 bushels, as compared to 488,220 bushels for same period of last year.

Castor Oil.—This market has increased in firmness during the period since our last review, consequent upon an enlarged demand, especially from the interior. This oil has been barren of any disturbing influences during the year, having been more or less in a firm position all the time with a uniform price of 14c for best grades and 11c for No. 3.

Lard Oil.—This oil is in rather a weak condition, with only inquiries for actual consumption. Sales durthe past week have been upon the basis of 60c in quantity lots for extra quality and leading brands.

Neatsfoot Oil.—Business is moving along in a routine way in usual channels for this season and aside from being in a slightly weaker position there is nothing of interest to note. Best grades and established brand command 52c in quantity lots and No. 1, 42@45c.

Boston Oil Market

[Special to the REPORTER.]

Cod.—This oil continues in dull demand, but there is a feeling that the market will be a good deal stronger, owing to reports of a small catch of fish, and that when a demand comes prices will be higher. Labrador and Newfoundland, 40@42c.

Degras.—The demand holds good for high grade oils, with the position of the market steady. American and German, 2⅝@2½c; English 2⅝@2¾c, French, 8@10c.

Linseed.—The market is still lower, with the demand only moderate. There is a feeling now that prices will not go materially lower and that they will remain stationary for a time. Car load lots at depot are quoted at 73c.

Menhaden.—Oil is very dull with only moderate jobbing lots moving. The reports concerning the catch continues poor. The price is 37c for all oil offering.

Sperm.—This oil is dull and featureless, with even small sales few and far between. Former prices are not lowered. Extra bleached winter, 95c, natural winter, 90c. Nothing of prime quality can be bought below these prices, but there is oil offering for less which is of poor quality.

Whale.—This oil is easy with the demand limited, and with stocks more than sufficient to supply the small requirements. Crude, 45c: natural winter, 46c; bleached, 50c; extra bleached, 52c.

Pipe Line Statement.

DRUG MARKET.

Note—Our prices are for large lots except when otherwise specified, and buyers of small quantities must expect to pay an advance on these figures

Complete prices current will be found on pages 41 and 42

SATURDAY EVENING, September 16, 1898.

The results of business operations this week continue to disclose some gratifying features, the more prominent of which are the steady tone of prices, the increasing confidence manifested by the trade in the general outlook and the gradual revival of interest which is in progress among buyers. All of the conditions that usually accompany a prosperous market are giving indications of returning life and the fall season, it is anticipated, will not be disappointing to the trade. As a rule the wholesale men are securing full values on current business and the fluctuations which have transpired since our last, exhibit the advantage which sellers now enjoy in many important articles. The general tendency of quotations is towards an upward range, and further advances are noted in quinine and opium. Quicksilver is again higher, bleached shellac has been marked up and the manufacturers have made an addition to the quotations of bromides.

ADVANCED.	DECLINED.
Opium	Camphor
Quinine, 2d hands	Senega root
Quicksilver	Chicle
Caraway seed	
Bleached shellac	
Cassia buds	
Oil anise	
Bromides ammonium, potassium and sodium	

Opium.

The situation in the opium market continues to be prolific of interest, and since our preceding review quotations have received an additional impetus. Not only has the tone of the market improved since our last, but the inquiry has expanded and the resulting distribution of goods has been more active. During the week the jobbing demand has increased and about fifty cases have passed into consumption on orders of that character. Several transactions involving quantities of five to fifteen cases are reported as having been closed and the prices realized on such lots ranged from $2 65 at the opening business to $2 70@2 80 at the close. On jobbing lots and broken parcels the closing figures are $2 75@2 85. Powdered is held at $3 35@3 50, but some lots have been available this week at $3 30. This price, however, is expected to cease with the end of the present week.

Quinine

The market for quinine remains very firm and is rapidly working into a much better position. During the week sales amounting to about 80,000 ounces are reported, which went at the range of 18¾@19¾c on regular terms. The London market is active and an advance to 9@9¼d is cabled to-day. Outside holdings here are materially reduced, and even for cash 18¾c is the minimum for 10,000 ounce lots. The situation is strong and the tendency is upward. In our editorial department we consider the subject more in detail.

Miscellaneous.

Alcohol.—Telegraphic advices from the West this week give very strong intimations that the long expected withdrawal of the Whiskey Trust from co-operation with the American Distributing Company is about to become an accomplished fact. It is reported that an important and exciting conference of leading representatives of both interests took place during the week at Chicago, at which a committee of influential members of the Distributing Company set forth their grievances in very energetic style. They are contending, it is said, for closer relations and greater security than is afforded by existing arrangements with the Trust and it is further rumored that unless their demands are acceded to and satisfactory guarantees for the future are made, they will cease their affiliation with the Trust. In the event of such a disruption the alcohol market would doubtless decline rapidly and as additional developments are anticipated, the situation is becoming extremely interesting. As relates to the demand for alcohol, the week has evolved no specially new features, the distribution aggregating the usual quantity. The decline note in our last issue has not stimulated purchases at all, buyers continuing, as a rule, to take only such quantities as the consuming requirements call for. The current quotations are being observed by purchasers, and $2 18@2 22 are the prices exacted, on which the customary rebate is allowed. From Boston we hear of quotations at $2 07 for barrel quantities, net cash in ten days.

Wood Alcohol.—The distribution is progressing satisfactorily and prices are being steadily maintained. There are no large orders in the market, but the aggregate of current sales shows a large volume. We continue to quote 95%, $1 40; 97%, $1 45, and the best grades at $1 50@1 60.

PHARMACEUTICAL SPECIALTIES

COCILLANA.—It gives us pleasure to announce to Druggists that although we have for two years been unable to obtain any stock of Cocillana we can now supply this Bolivian remedy, which experience has proved to be of marked therapeutic value in the inflammations of the respiratory organs, in Coryza, Bronchitis, Hay Asthma, Influenza, Pneumonia. It has also laxative and purgative qualities, and has been employed successfully as a substitute for Ipecac and Apomorphia in Catarrhal conditions.

Among the many methods of administering medicaments, the soluble elastic gelatin capsule is growing to be one of the most popular.

Of Extra Sixed Elastic Filled Gelatine Capsules, there are castor oil 3 1-2 to 15 grammes cod liver oil 2 1-2 to 15 grammes; male fern and castor oil; santonin and castor oil.

Emulsion of Cod Liver Oil. With Hypophosphites, is the perfection of an emulsion, pure fluid palatable, Each fluid ounce contains, Cod Liver Oil 4 fluid drachms, Hypophosphites of Lime, 8 grains; Hypophosphites of Soda, 4 grains; Gum Arabic, Sugar, Glycerine. water and carminatives.

Esencia de Calisaya is now well established as an agreeable stimulant febrifuge, and possesses all the medicinal virtues of Calisaya.

Weld's Syrup Iron Chloride has met with instantaneous favor. It is an entirely palatable syrup of officinal tincture iron chloride, combining all its virtues with none of its drawbacks.

Coca Cordial presents coca in a palatable form. The astringent and bitter constituents of the drug are rejected in its preparation, and it commends itself especially to the large class of persons of delicate nervous organization as a heart stimulant and invigorator.

Acid Phosphates, Liquid—A nerve and brain food; relieves symptoms of mental exhaustion, such as sleeplessness, melancholia etc.: is in considerable demand as a stimulating beverage, dispensed at the soda fountain in place of an alcohol stimulent.

Chlor-Anodyne—Is a combination of capsicum, morphine, chloroform, cannabis indica, oil of peppermint in serviceable and scientific proportions. It is serviceable in controlling the acute pain of colic and of diarrhœal disorders so prevalent during the hot months of summer.

Lime-Juice and Pepsin—Is a very agreeable and helpful tonic to be taken before meals. It corrects acidity and promotes digestion. Each fluid ounce contains one fluidrachm of pure lime-juice and 80 grains of saccharated pepsin U. S. P.

Anodyne Pine Expectorant and Bronchial Sedative are admirably adapted for expectorants and cough sedatives in Bronchitis, and for cough mixtures. These are put up in pint and half-gallon bottles. Among the newer remedies for cough and respiratory affections are: Grindelia Robusta, Quebracho, Myrtus Chekan, Yerba Santa, and Lippia Mexicana.

Glycerin Suppositories of our manufacture are guaranteed to contain 95 per cent. glycerin. We put them up in convenient packages for dispensing in bottles of one-half dozen and dozen.

We make a line of eligible antiseptics and disinfectants for internal and external use, including **Eucalyptus, and Thymol Antiseptic, Copper Arseniate Triturates, 1-100 and 1-500 grains; Tablets of Yellow Oxide of Mercury; Chloranodyne in ounce, 1-4, 1-2 and pint bottles; Antiseptic Liquid, Antiseptic Tablets, Disinfectant Powders, Sulphur Bricks and Ethereal Antiseptic Soap.**

We shall be pleased to forward, on request, any information desired concerning these products.

Borax.—The inquiry from channels of consumption shows a slight improvement as a result of the revival of operations in many of the industrial establishments throughout the country, but as yet the movement is comparatively light in volume and buyers are taking no more as a rule than they can find ready use for. Values continue steady and quotations range as follows: California refined 8@8¼c, city refined 8¼@8½c, concentrated 7½@8c, and powdered 8@8½c.

Bromides. — The manufacturers have advanced their prices on bromides to the following figures: Bromide potassium 35@36c, bromide sodium 40@41c, and bromide ammonium 45@46c,

Carbonate Ammonia.—The market is firm at former figures and the consumption is on the increase.

Castor Oil. — Manufacturers continue to report a favorable state of business and orders from jobbers are reaching the market with greater freedom than has been the case recently. Quotations are closely maintained at the following figures: In barrels 14½@15c and in cases 15@15½c, according to quantity.

Citric Acid.—While there is but little inquiry, manufacturers are still supporting their quotations firmly. In London the latest advices show an exceedingly strong situation there.

Cod Liver Oil.—Interior buyers are beginning to take an active interest in cod liver oil, and orders for goods are being freely placed. The prime grades especially are in request and several sales of five to ten barrels of these qualities have transpired this week. We quote the market firm at $18 75@22, as to brand and quantity.

Cuttle Bone.—The market is easy and current orders are limited as to size. As to grade of goods buyers are paying 11½@13c.

Menthol.—The market is very firm at the recent advance, available stocks being light and held in strong hands. Values range from $3 85@4 25, but there are few sellers at the inside figures.

Quicksuver.—The London market has appreciated and values here have responded, an advance being named by holders who are quoting 52@54c as the range to day. The market is firm, and the volume of current business is fair. The San Francisco market is quotable at $40 50 for fifty flask shipments and $51 for a less quantity. A year ago the price there was $41 50@43 50 and at the same time in 1891 at $55@56 50. The movement of stocks at the same port is given as follows: Receipts January, 1893, 2,260 flasks; February, 2 388 flasks; March, 1,588 flasks; April, 1,460 flasks; May, 2,389 flasks; June, 2,789 flasks; July, 2,014 flasks: August, 1,923 flasks: total since September 1st, 162 flasks; total since January 1st, 16'973 flasks. Corresponding period 1892, 14'100 flasks.

Sponges.—The general situation has not changed. Trade has improved a little, but the scarcity of certain lines of goods is a complaint of most dealers. Prices as given last week remain in force to-day.

Balsams

Copalba.—The requirements of consumers do not increase and the article remains more or less neglected. On current jobbing transactions the former range of prices is maintained.

Fir.—The advance noted last week in Canada balsam is being well supported and quotations below $3 have generally been withdrawn. The article seems to be difficult to obtain in primary sources.

Peru.—This market remains very dull and the light demands of the trade are being met at $1 30@1 50.

Tolu.—Although values are firm, business has not expanded beyond the usual jobbing proportions and goods in that way are available at 23@25c.

Barks.

The movement in barks has not been brisk and the orders in hand cover only the pressing wants of buyers. The chief exception to these remarks relates to orange peel, of which the consumption seems to have increased, and the demand is still moderately active within our range. Soap bark is selling at 4@4¼c, as to quantity, but the inquiry has subsided materially.

Beans.

Vanilla.—Transactions continue to reflect a fairly active consuming demand, and local prices are very firm on all grades. Arrivals of twenty five cases from Mexico are reported since our last. On Mexican beans, according to quality, the range is $5@13, and Bourbon command $3@9.

Tonka.—There are no novel features to chronicle this week, business retaining a quiet appearance and quotations being steady at our range. We hear of a negotiation involving about 5,000 lbs which will probably result in a sale in a day or two.

Berries.

Cubeb.—Values remain without improvement, and in view of the large stocks held abroad low prices will probably continue. We quote 20@30c, as to quality.

Juniper.—The demand has been satisfactory and numerous sales of five to ten bag lots brought up the aggregate to a large volume. Prices are firm at 1¾@2½c, according to quantity. Reports from Italy state that the crop there is a light one, offerings being limited and the tendency of values being in an upward direction, new berries in Leghorn being worth the parity of about $1 45 per cwt.

Essential Oils.

There are few important or interesting developments to note in connection with this department. The leading feature of the market consists of the steady prices which are prevailing for nearly every article in the list. The wants of buyers are as yet held in abeyance and no extensive lots are reported sold. Reports from the French producing districts continue to represent that the late drought there has seriously affected the crops of rosemary, thyme, lavender and analogous herbs, and consequently it is anticipated that the essences distilled from them will be held higher. As yet, however, the market bears no indication of a change in values.

Anise.—As a result of strong reports from abroad, holders here have advanced their views and are quoting to-day at the range of $1 40@1 50, as to quantity, but there are parcels still to be had at $1 37½. Business has been restricted to passing requirements only.

Caraway.—While transactions are limited to present needs, the market is firm for all grades, owing to the enhanced price of seed. We continue to quote $1 15@1 75 as the range for oil of the seed and 40@52c for chaff.

Cassia.—The situation is without change. Hong Kong advices represent values there as firm. Here a light trade is in progress at 75@85c.

Cubeb.—This oil is dull and prices continue depressed. Our previous quotations are still in force.

Rose.—This oil is exceptionally firm and the inquiry is active. For ordinary grades the trade exacts $7 75@8, and for special brands $8 25@8 75.

DODGE & OLCOTT
NEW YORK

Sassafras.—There have been inquiries for round lots, but no transactions of particular importance are reported. Prices are steady at 36@38c for natural, and 25@27c for artificial oil.

Spearmint.—Holders are realizing $1 75@2 50 on the light business now in progress, but some expectations of firmer prices are indulged in, owing to reported short crops in the interior,

Flowers.

Calendula.—A small jobbing inquiry for this article develsped during the week, but no important action can be noted. Sales are being made at 17½@18c.

Chamomile.—The distribution indicates continued interest on the part of consumers. We hear of a lot of 500 lbs new German flowers sold at 21c, and another of 1,000 lbs bringing 20c. The market range is 20@26c for the last crop German and 20@27c for Roman, as to quantity.

Insect.—The demand exhibits but little animation and prices are firmly supported at our range.

Koosso.—This article is held at 63@65c as to quantity, but the inquiry is momentarily quiet.

Saffron.—Some holders of American saffron are endeavoring to secure a small advance on prices and are said to be quoting at about 2c above recent figures, but this attempt is being nullified by other large holders who continue to offer freely at 25@30c.

Gums.

Arabic.—The demand relates almost exclusively to jobbing requirements but the aggregate of sales during the week indicates increased interest on the part of buyers. Of picked gums we are reported sales of twenty bales at full figures and sorts five bales at our range.

Asafoetida.—A firm market exists this week but beyond a few scattered cases the inquiry has not been productive of important results.

Camphor.—Manufacturers are now quoting at reduced prices and 46c in barrels and 47c in cases are the present figures. Second hands are offering at one cent under these figures. Japan compressed blocks are unchanged at 47@49c, as to quantity.

Chicle.—This article is lower in price and sales have been made down to 25c. We note the arrival of 304 bags this week from Mexican ports.

Tragacanth.—The situation does not improve as regards the demand, but the range of the market is steady at previous quotations.

Herbs and Leaves.

Cuchu.—Short leaves have met with a good jobbing distribution and current values are steadily supported at 13@16c.

Coca Leaves.—The demand is depressed. For Truxillo we are quoted 15c and Huanuco 30c on ordinary quantities.

Henbane.—This article is wanted moderately, but buyers are unwilling to negotiate for quantities and 6½@7c represents current values.

Senna.—Prime leaves are called for to a fair extent and local supplies of these grades are not excessive. On an inquiry for twenty-five bales Tinnevelly a leading house was obliged to pass the opportunity for lack of spot goods. Values for this description range from 6@20c and natural Alexandria 14@17c.

Roots.

Ginger.—The distribution on orderr for consumption has increased in volume, although values are without change.

Ipecac.—This article is momentarily neglected, but holders are showing no disposition to quote below $1 35@1 40.

Jalap.—A better movement is in progress but quotations do not rise above 21@25c.

Orris.—The market shows a lower tendency and orders may be placed at a fraction under last week's quotations. Reports from Italy show that the new crop is reaching the markets and that decreased prices are being accepted there by holders on both Florentine and Verona roots.

Sarsaparilla.—Supplies continue scant, and although the inquiry is not brisk quotations are firm at 9½@10c for Honduras.

Senega.—Prices have declined under freer offerings and lower quotations from the country, where sales have been made at 32½c for Minnesota root. We quote spot goods at 33@36c, as to kind and quantity.

Seeds.

Anise.—The market is steady and holders are finding no difficulty in upholding the current range. We are given sales of 25 bags new, Italian seed on private terms.

Canary.—The situation is dull, transactions being limited to small jobbing orders, which are being executed at 2½@2⅝c as to quantity.

SATURDAY EVENING, Sept. 16, 1893.

The past week has been a quiet one as regards the demand for either spot or future delivery of any of the leading chemicals on the list. A few inquiries have come to hand from the glass trade for both alkali and salt cake for prompt shipment, as nearly all of the fires will be lighted by the end of the month. The settlement of the coal strike abroad does not look as bright as at the close of our last. It is intimated that unless some satisfactory arrangements are soon made a general shut down will be made abroad by the various makers. Considerable is heard around the trade about the general improvement in business, but as a chemical man expressed it: "It is said that faith has its reward, and while this may be so, it certainly requires the exercising of a goodly quantity of this element in human character to believe that there is a very material improvement in business. That there is a slight improvement, there is no doubting, and this, in a measure, may be attributed to the enhanced strength of public confidence, brought about by the recent action of Congress on the Sherman Silver Bill, but it is believed there will not be a positive re establishment of confidence among business men until the gentlemen of the Senate shall have exhausted their verbosity and emulated the action of their fellow legislators in the House, on the much discussed silver question." There is a slight advance in chlorate of potash on account of higher prices abroad. Brimstone is weak and dull. The other light chemicals show few changes as given in detail below.

Heavy Chemicals.

Carbonated Soda Ash.—During the past few days there has been rather more demand for September and October shipments of high test, as many of the glass factories use this style of ash. The coal strike abroad, however, is having more or less effect on prices, as holders are not inclined to quote without a strike clause. Sales are reported of 100 tons to arrive at 1 20@1 25c as to quantity and date of delivery. There is almost no stock in first hands on the spot, hence what little is being done is for future delivery.

Alkali.—During the past week there has been a better demand for spot goods or for deliveries upon existing contracts, which have been held back during the recent financial depression. There is no scarcity of stocks, neither is there any urgent demand, for the reason that about all of the large consumers are well stocked for the present. So for the coal strike abroad has had no perceptible effect on prices which continue to rule low both for spot and for future delivery. Competition among the various makers continues sharp and from present indications it is likely to remain so for some time to come. For 58% on the spot they are nominally quoting 1@1 05c as to quantity and style of packing, but for a contract extending over next fire in bags they are quoting 95c. So far, however, nothing of importance has been done.

Crystal Carbonate.—There is an improved demand for September and October shipments. Sales are reported of 60 tons at 1 90@2c, as to quantity and date of delivery. Owing to light stocks on the spot prices are held firm at 2 10@2 15c, as to quantity and holder.

Caustic Soda.—Cables to hand report an active demand abroad for spot goods at the advanced price, with intimations that another advance in values is not unlikely to occur should the present coal strike continue. As it seems likely to prevail, in that case it is reported a general shut down will take place among all the foreign makers. The demand here is very light, only small lots to cover current wants being the order of the day. The bulk of the arrivals to hand are deliveries upon existing contracts. Sales are reported of 150 dms 70-74% at 2 80@2 82½c and 50 dms 76% at regular quotations.

Sal Soda.—The price of foreign makes having been advanced abroad to a price equal to about 1 02½c here, buyers have turned their attention to the domestic, which is still procurable at 97½@1c f. o. b., less the usual discount for cash. There are, however, some lots of foreign on way held by outside holders, who have not as yet advanced their price and are quoting 95@97½c as to make, quantity and date of delivery, with sales reported of 25 tons within the range.

Salt Cake.—At the moment only a few inquiries have come to hand from the glass manufacturers for contracts extending over next year for the reason that nearly all of them have sufficient stock on hand to last for several weeks. It is reported that one of the domestic makers have sold their output for the balance of the year at a price reported to be about 55c. The general asking price for domestic is 60@62½c f. o. b., for next fire, but beyond the sale mentioned above, nothing of importance has been done. Foreign is dull and nominally quoted at 55@57½c, as to make, quantity and date of shipment.

Bleaching Powder.—There is very little to be said regarding this article, the demand being not at all as brisk as dealers anticipated. The starting of many of the mills in the east will no doubt very soon have a beneficial effect, if no more than lead to the resumption of deliveries upon existing contracts which were suspended during the late financial depression. Sales are reported of 125 casks hardwood at 2¼@2½c, as to quantity and holder. There is ample stock of softwoods to meet all requirements which are obtainable at 2@2½c, as to make, quantity and holder.

Acids.

Acetic.—Trading is limited to actual wants of consumers and these at the moment are of a retail nature. Prices, however, remain steady at 1¾@2¼c as to quantity and place of delivery.

Oxalic.—There is a slight improvement to be noted in the demand for this article. The starting up of so many mills, is one reason assigned for this increase in the demand. Sales are reported of 30 casks on the spot at 6½@6¾c, and 15 casks to arrive at 6@6 05c as to quantity, make and position of goods.

Tartaric.—There is almost no demand for important lots, only small jobbing orders such as daily wants require are being taken at 22½@23c, less the usual discount.

Muriatic.—Trade has been rather quiet during the past week. Stocks, however, are not excessive, hence little cutting in prices is heard among the trade. For round lots of 18% they are quoting 80@85c, while for jobbing parcels they are quoting 1@1¼c, as to quantity.

Sulphuric.—The improvement noticed in our last has slacked off to some extent during the past week. Buyers are pursuing a conservative course, only taking such quantities as their immediate wants require. No inducements in the way of a cut to increase their orders beyond actual wants induces them to go forward. It is reported that in the East and up the State, where competition is sharp very low prices are quoted. Sales are reported of bulk 66% in a large way at 70@75c, but for obys, the price ranges from 80@1c, as to quantity and maker. Chamber acid is in better request, with sales reported of 1,200 tons at $8. f. o. b. factory.

Sole Agents for the United States 54 William St., New York.

WING & EVANS have appointed as exclusive Sale Agents

Messrs. LINDER & MEYER, BOSTON, for New England States, who are prepared to contract for future delivery

Miscellaneous Chemicals.

Acetate of Lime.—There has been rather more demand for home consumption, but for export there is almost nothing doing at the moment, owing to the high rates of ocean freights demanded. Prices for the present may be quoted at 90@95c for brown and 1¾@1⅞c for gray, as to quantity and place of delivery. But for a round lot for prompt cash no doubt they could be shaded.

Arsenic.—There is a better demand for spot goods to meet the urgent wants of the glass makers who are getting ready to light their fires. Sales are reported of 50 kegs at 3¼@3⅜c, as to quantity and holder. Future shipments are held at 3⅝c, owing to the trouble in securing freight room.

Alum.—The usual jobbing demand prevails for spot goods. The starting up of so many mills of late has given rather more life to the market, on account of their drawing rather more freely upon their contracts. Values remain steady as named by the combination, at 1 75@1 85c as to quality and place of delivery.

Blue Vitriol.—Dullness and a light demand are the general complaints around the trade. While the combination continue their quotation of 3⅛c for car lots, there are outside lots still procurable at 3¼c, at which we note the sale of 40 bbls.

Brimstone.—There is almost no demand for spot goods for the reason that nearly all of the consumers are under contract for their supplies for the next two or three months. Spot is offered at $18, but for October-November shipment $17 is named and for December $16 80 is quoted for best seconds. So far, however, it has failed to attract buyers.

Chlorate of Potash.—The market is a shade firmer owing to the absorption of the cheap lots that have been pressing on the market of late. The demand, however, is not very active, only small sales are being made to meet current wants at 15c, as regular holders are not disposed to sell large quantities pending the unsettled state of the foreign market owing to the coal strike.

Chlorate of Soda.—Owing to light stocks available on the spot, trade in this article is restricted at the moment. We quote 18@19c as to quantity and position of goods.

Cream Tartar.—Buyers at the moment are limiting their purchases to meet their current wants, and these are generally of a jobbing nature, all of which is satisfied at 18⅛@19c, as to quantity and maker.

Copperas.—As the cold weather approaches the demand for this article as usual slacks off. For car load lots they are nominally quoting 70c, but to place a round lot this can be shaded. For jobbing parcels they are quoting 80@85c as to quantity and holder.

Nitrate of Soda.—The market is gradually assuming a stronger position, owing to recent arrivals being cleared up from docks. The demand, however, is not very urgent at the moment. Sales are reported of 3,000 bags in lots at 1 65@1 70c, as to quantity. At the close, however, 1 72½@1 75c was generally quoted. Messrs. W. R. Grace & Co. in their circular of to-day say: "With the abatement of the financial stringency, the nitrate market here is firmer. There is much less reselling by consumers, and the large arrivals of the last thirty days have nearly all gone into consumption. The visible supply is getting smaller, and as prices in Europe are much above values here, it is not likely that new purchases for the United States will be made on the coast for the present. We quote on spot 1 75@1 80c and to arrive 1 85@1 95c. The actual cost of importing is fully 1 92½c. Estimated quantity in store New York, 61,000 bags; discharging ex vessel New York, 7,000 bags; due to arrive in Sept., N. Y., 35,000 bags; do. Boston, 8,000 bags; do, Hampton Roads, 12,000; total, 55,000 bags; due to arrive in Oct., Hampton Roads, 7,000 bags; do, Savannah and Charleston, 18,000 bags; total, 25,000 bags; due to arrive in Nov., N. Y., 52,000 bags; do, Phila., 36,000 bags; total, 88,000 bags; visible supply to Dec. 1, 1893, 236,000 bags.

Glauber Salts.—There being about no demand it is almost impossible to give correct quotations, especially when the various makers are in sharp competition. We quote 80@1c, as to make and quantity.

Sugar of Lead.—The demand for this article at the moment is limited to such quantities as current wants require, and these have been unusually light during the week under review. We quote brown at 5¼@6c as to make, quality and quantity. White is unchanged at 10¼@11c as to make and quantity, less the usual discount.

Sal Ammoniac.—No change to note either in demand or values at present, though it is reported that an advance may be made shortly owing to a firmer market abroad. We quote lump at 8¼c, and grey at 5¼c.

Ammonias, Potashes and Fertilizing Chemicals.

The improvement in the demand noted in our last shows no abatement as regards the various ammoniates on the list. The low prices which have prevailed of late for some grades have brought out the orders both for prompt and for delivery over the next sixty days. Sulphate of ammonia has been in good request, with sales of several round lots of gas liquor at $3 30 and of bone at $3 10. For future shipments they are quoting $3 60, with some holders asking $4. The market, having been cleared of all cheap lots of blood that have been pressing for sale of late, is firmer in all positions. For the first time in a long while low grades owing to scarcity are bringing more money than high grades. We note the sale of 1,000 tons low at $1 90 and 700 tons of high grade at $1 95@2. The market closes firm at $2@2 05 for high and $2 10@2 15 for low grade, as to quantity. Azotine is also in request at $2 05. Bone meal is doing better, with sales reported of 300 tons of domestic at $22. Calcutta is held at $23 50 per ton and domestic at $18 per ton f o b Chicago. Fish scrap is held firm by the combination at $24 per ton for dry and $14 per ton for wet f o b factory. There are outside holders who are quoting a shade under these figures. Sulphate of potash and double manure salt have both been in better demand for spot and nearby arrivals. Nothing, however, has been done in

future contracts extending over next year, as prices have not as yet been fixed beyond the present year.

Muriate of Potash.—What arrivals are coming to hand are deliveries upon existing contracts. Consequently few round lots find their way on the market, specially since the financial situation has become easier. Prices remained unchanged as established by the various agents of the syndicate.

Boston Chemical Market

[Special to the REPORTER.]

Alkali.—There is only a moderate demand on spot, with enough stock to meet it, but large purchases are not made, consumers having enough on hand to keep them going for some time, as they are not, as a rule, running their mills to the full capacity. Round lots 1 05@1 10c, jobbing lots 1 10@1 15c.

Bleaching Powder.—The better tone continues and more inquiry is reported both on spot and to arrive. Consumers are beginning to come forward with their wants and negotiate future contracts. The jobbers are meeting with an excellent request and stocks are no larger than will be required if the situation continues to look up. Spot 2¼@2 15c.

Blue Vitriol.—The market is still quiet, but steady with the tone more inclined to firmness than weakness. Round lots, 3¼c.

Caustic Soda.—The jobbing trade is experiencing a good business, almost amounting to activity, and there is also a little more life to business for future delivery, though the demand is by no means large, as yet. The market is steady. Spot, 2 80@2 85c.

Chlorate of Potash.—There is a fair request. Crystals, 15@15½c; powdered, 16c.

Sal Soda.—The demand is moderate with the position steady and prices unchanged, for English. Spot, 92½@95c; for September shipment, 1@1 05c.

[Special to the REPORTER

Carbonated Soda Ash Liverpool 48%—Is moving along quietly and a better demand is anticipated in the near future. Spot goods are quoted at 1 30@1 35c and shipments are obtainable at 1¼@1 35c.

Alkali.—Is in better demand and has been arriving freely but nearly all placed on contracts to go into immediate consumption. 48% on spot is quoted at 1 30@1 35c, and shipments at 1 20@1 30c. To arrive there is nothing offering at present. 58% on spot is held at 1¼@1 35c, and shipments are quoted at 1 15@1¼c.

Caustic Soda, 60%—From store can be had at 3 05@3 15c, and to arrive 2 90@3c will buy. Shipments are held at 2⅞@2 95c. 74% is selling at 2 90@3c, as to quantity and brand, and future deliveries are obtainable at 2 77½@2 85c.

Sal Soda—Is offering at 1 05@1 10c and shipments are quoted at 95@97½c.

Black and White Pepper.

From an official report just published concerning the trade of Bangkok, (Siam,) we note that, after rice and teak, pepper is the principal export from Siam. In 1892, 1,175 tons were exported, a slight falling off compared with the previous year. The pepper business is entirely in the hands of two British firms at Bangkok, and as bargains are enclosed simultaneously at London and Bangkok by telegraph, it is a perfectly safe trade. The price during the past year continued to fall, ranging from 22 ticals per picul (£30 10s. per ton) for white pepper, and 16 ticals to 10 ticals (£22 3s. to £13 7s. per ton) for black. As recently as 1888 the price reached the high figure of £88 per ton. It would appear that the big profits in those years were made by the middlemen—Chinamen, who buy the standing crops and take all risks of disease or worm. The pepper crop is gathered in March, and is in the Bangkok market about a month later. When the berries are plucked, they are put through a winnowing machine with three compartments. The heaviest berries drop into the first, and after being macerated in water, by which the outer black covering is removed, become white pepper. The lighter and inferior berries of the second compartment form black pepper, and those in the third are waste, from which the best grains are extracted and added to the second kind. Of the export, two-thirds were white and one-third black pepper. All the white is shipped to London and the black to China. The local consumption is small. The prospects for the present year are good. The quality seems excellent, and there are no complaints of scarcity, though growers assert that if the price falls any lower it will be impossible to continue cultivation.—*London Grocer.*

Some Cotton Oil Problems for Chemists

BY C. B. WARRAND.

It is a well known fact that cottonseed oil cake, even from the most perfect mills using green seed or upland cottonseed, contains 10 per cent. of oil. One ton of cottonseed contains about fifty gallons of oil or a little more. Thirty-five gallons is considered a very good yield. In the 1,000 pounds of meal about 100 pounds of oil remain after expressing the oil, hence to obtain a perfect solvent has been a very important problem to the technologist.

Many solvents are known. None so far has been found to answer fully in all respects. The greatest objection has always been the low temperature at which such solvents boil, and the invariable end of all plants operated by solvents in England, where more has been attempted in this line than in any other country, has always been sooner or later a total destruction by fire.

Some time ago I thought that a solvent for cottonseed oil might be obtained from the slack or still water produced by the distillation of spirits of turpentine. The amount produced annually, about 500,000 barrels, or 20,000,000 gallons, seemed vast enough. It could be concentrated at various points for about one cent a gallon. Two of its constituents, acetone and methyl alcohol, are perfectly harmless, leaving no odor or smell in the meal, and they are as perfect as solvents. The third, acetic acid, if satiated with carbonate of baryta, will remain in solution, while acetone and methyl alcohol are easily regained by fractional distillation. The solution of acetate of baryta can easily be evaporated in cast iron vessels without any special care until the salt is crystallized. If the acetate of baryta crystals are distilled the product will be acetone and carbonate of baryta, which can be used over and over again without loss.

Assuming that this still refuse water only contains 2 or 3 per cent. of these three solvents, which can easily be converted into two, efficiency and cheapness would undoubtedly be attained from an ample source. But acetone boils at a temperature of 135° Fah., and methyl alcohol about 155°; hence no capitalist would care to invest with an almost certain end of destruction of the plant by fire. That it would be profitable to recover acetone and methyl alcohol for their commercial value is quite probable, but as it is not pertinent to the problems of cottonseed oil solvents, it is not necessary to look into the problem any further in this article.

Cottonseed oil so far has always been obtained and treated almost exclusively by mechanical or physical means. The crude oil is subjected to a low degree of temperature, or in other words, frozen. A portion will congeal and a portion will remain liquid oil. The frozen portion will contain stearine oil and a residue, a glue like, creamy white mass known in commerce as cottonseed oil foots. The only general use these foots have had so far was for soap-making. The stearine is largely used for the manufacture of so-called refined lard. Whether there is any refining about it is very problematic. That it is merely a mixture of ground green bones and grease obtained from various refuse parts of the hog is quite possible, if not an actually proven fact. The frozen residue is put in a hydraulic filter press and the oil and foots pressed out. The non-congealed oil and that obtained from the stearine have very distinct capacities and give very different results by certain treatments.

Another fact which is very interesting is the fact that the remaining part of oil in cottonseed oil cake is to greater extent available to be converted into rubber than that recovered. The cruder the oil the more available it is for the rubber manufacture, which is undoubtedly a product of oxidation, just the same as natural rubber is the production of the oxidized juices of the rubber tree. So far only the slow and mysterious action of sunlight and heat have been applied to a portion of the crude oil with success; whether this can be done profitably on large scale has been pretty well proved by the immense plant which is now in the course of erection near Savannah. It is also a significant fact that a plant for making their own oil is part of the project. It will undoubtedly be of great benefit to individuals and probably to the rubber trust, but to the cotton planter and consumer of rubber goods it will be of little or no benefit, unless parties outside of the rubber trust take sufficient interest in the matter to spend money for investigation, and, when a satisfactory result is obtained to establish a plant.

Can the product to make rubber be obtained from the seed direct? Can electricity take the place of sunlight? Can ozone, this mysterious combination or state of oxygen, be utilized directly? Can the oil be so finely sprayed and brought in contact with atmospheric air under the necessary conditions to be oxidized within a few hours? These are all problems which can be solved by series of experiments which require only knowledge, money and brains; one without the other will not be of much avail.—*Manufacturers' Record.*

DYE MARKET.

Note—Our prices are for large lots except when otherwise specified, and buyers of small quantities must expect to pay an advance on these figures

Complete prices current will be found on page 53

SATURDAY EVENING, Sept. 16, 1893.

The improvement noticed in our last still continues, although it has not as yet materially affected prices. The demand for some articles in this list although much stronger, yet as a rule, did not exceed jobbing proportions. The brighter financial situation gives cause for much encouragement, but without a vigorous demand but little improvement in market values will result.

Albumen.—Last week's quotations still continue to be maintained, although the market presents a more encouraging aspect. Trade continues, however, to show a contracted volume, only moderate quantities having been consumed. Egg is still held at unchanged prices. Blood sells in a regular way at 15@18c. Some brands are quoted as low as 6c, but are of such inferior quality that no outlet is opened to them.

Anilines.—While there has been a better outlook, with possibly a steadier tone to the market, the demand has not exceeded greatly that which was spoken of in our last report. Important action has long since ceased, but, as the situation is growing brighter, we may look for a change, but it will be a very gradual one. The prices ordinarily range from 13@13½c for salts, and 14@14½c for oils, as to quality and quantity.

Alizarine.—There is seemingly no inclination to press these goods on the market, as the demand is of small character, and all efforts to force purchasing would result in a lowering of values. We quote 17@18c, as to quantity.

Bichromate of Potash.—Quietness still continues in this department, with here and there occasional sales of a small character as the requirements of consumption demand. Values, however, continue to be held on the basis of 10½@11c, as to foreign or American makers, as to quantity.

Cutch.—Only small quantities have found an outlet during the past week and the quotations are on the same range as heretofore. Holders refuse to press their supplies on the market as they have conceded as much in the way of values as they consistently can. Values continue to be quoted at 4¼@4¾c, as to brand and quantity.

Divi Divi.—There was a perceptibly better demand in this article during the week, with a steadier feeling and a gradual hardening of prices. A transaction of 1,500 bags to a dealer was made on private terms. The outlook is much brighter and values are firm at $50@60, as to quantity.

Dyewood.—The movement continues inactive, and with the exception of a moderate distribution there has been no demand. Supplies are more or less depleted, and as additions come to hand slowly no accumulation of spot stocks are being made. Quotations are as last reported.

Gambier. — Notwithstanding the brighter outlook and the steadier tone that has prevailed throughout the past week, prices have not as yet responded but remain unchanged at 3¾@4¼c for spot. The demand is looking up, and although the sales were for the most of jobbing proportions, yet the increased inquiry of the week gives encouragement to holders to look for a near revival of activity. To arrive the price quoted is 3¾c and forward shipment is maintained at 3⅞@4c.

Indigo.—While the offerings continue liberal there is no indication on the part of buyers to respond. Stocks are light both here and abroad and as the crop reports do not advise encouragingly it is thought that the supplies will be smaller than for last year. Values remain unchanged. We are indebted to Messrs. Parsons & Keith for the following under date of September 4th, concerning East India indigo: "The declaration of the quarterly sales to be held on October 9, 1893, prompt January 12, 1894, were made to-day, and comprised 3,450 chests consisting of 1,050 chests Bengals, Oudes, etc., 1,630 chests Kurpah, 190 chests Madras, 100 chests Manila and 480 chests Bombay Figs."

Madder.—There has been no change noticed in this article and apart from the average distribution to satisfy current wants, no activity has been displayed. We quote Dutch at 10@15c, and French at 9@9½c, as to quantity.

Nutgalls.—Moderate quantities of this article have found a consuming outlet at the former prices of 13¾@14c for prime grades Aleppo. China galls do not command any immediate attention, and are nominally quoted at 13@13½c, as to size of package.

Prussiate of Potash.—A slightly better feeling has pervaded throughout this market, although it has not contributed any strength as yet to the market values. Small lots sold well, but large ones were avoided. For not less than 50,000 lbs German yellow 21c per lb; for less than 15,000 lbs 21½c, smaller quantities 22c f o b New York, Boston and Philadelphia. For 15,000 lbs Scotch yellow 21½c per lb, for smaller quantities 22c per lb f o b New York.

Sumac. — There was considerably more activity displayed in this market during the past week. Sales aggregating 1,500 bags spot goods were made on the range of $65@70, a small lot selling under the inside price. The to arrive and forward shipment is held at $65@70 for Sicily. Virginia is quiet and nominally quoted at $43@46.

Boston Dye Market.

[Special to the REPORTER.]

Cutch.—The market continues absolutely quiescent, with prices unchanged; but actual buyers can obtain concessions from these figures without difficulty. No offerings are being made from Calcutta. S. M., 4½c; Star B., 6½@7c.

Gambier.—More activity has been noted during the past week, and a good jobbing trade has been done. Prices are firm and without change; but spot stocks are becoming gradually depleted, and with the general feeling of the trade that the lowest prices have been touched, a gradual advance is looked for. There is no gambier due here until the middle of October, and the stock by this vessel is not being offered in the market. The statistical position of gambier with regard to Boston is as follows: In store, Sept. 1, 3,000 bales; afloat, ex Emma T. Crowell, due about Oct. 14, 3,253 bales, making the total visible supply to Nov. 1, in store and afloat, 6,253 bales. Ex store is here quoted at 4c; cubes No. 1, 6¾c; No. 2, 6c

Indigo.—Continues in the same position, with trade yet quiet, in a large way, but with some jobbing business going on. Prices are steadily maintained. The crop advices received by cable this week give the crop of Bengals at 110,000 maunds, which is, of course, approximate.

Nutgalls.—The considerable activity heretofore reported is entirely lacking now, and the feature of this article seems to be the extremely small inquiry. Aleppo, 14c; white, 9@10c; green, 12½@13c.

Sumac.—There is practically nothing to say about this article, so far as this market is concerned. The first steamer from Palermo is not expected to arrive before the middle of November, and with any fair consumptive demand the spot stocks will scarcely last until that time. Prices for Sicily are unchanged at $70@75 according to brands, for future shipment, $66@72, according to brand. Owing to the limited demand during the past two or three months in the consuming sections and the scarcity of money, the grinders of Virginia sumac have accumulated only a small stock of leaf, not over two-thirds of their usual purchasings. The quality of the Virginia is reported as very good. Ex store, $43@45.

Woods.—There is no change in the situation of logwood, which continues extremely scarce, with prices very strong. From the north side of Hayti $40@42, from the south side $35, Laguna $50, Jamaica $35. Fustic continues quiet, but strong, on account of the small stocks.

Awards for Ordnance Supplies.

Following is a list of the awards for ordinance supplies for the National Armory, Springfield, Mass., for this year:

Bidder 7, John H. Doolitte.
11. G. L. P. Chambers & Co.

For Particulars Apply to

VACUUM OIL CO., Rochester, N. Y.

Or any Branch.

The AMERICAN Wick

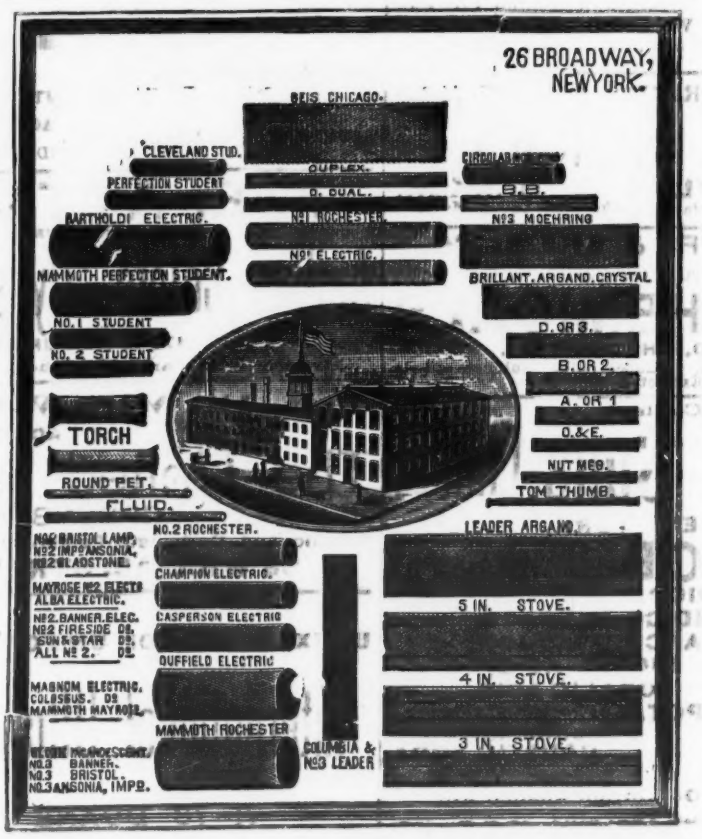
Is made on Scientific principles. The gum and dirt inherent in the natural cotton are taken out by chemical processes, involving, besides the expense of the treatment, considerable loss of material; but no loss or expense is spared to produce a wick that will give THE GREATEST ILLUMINATION.

Oil drawn up through the American Wick burns with a large, clear, white light and the flame does not drop off in size as it does when a poor wick is used. When the cotton is clogged with dust and gum as it is in common wicks the full illuminating power of the oil is not obtained and the complaint is heard that the light *drops*.

To ensure the best light, attention must be given to the following points:

THE WICK.

Ask your storekeeper for the **AMERICAN.** If he has it not in stock, tell him to send a postal card to a wholesale dealer, who will supply him. There is no way to get the best light without using *the best wick.*



2. THE LAMP.

Is it dirty? Has it been emptied recently? Every lamp should be emptied completely *once a week*, and always before putting in a new wick.

Is your lamp filled frequently? Lamps should be filled *every day*, so that you may begin the work of the evening with a full fount.

3. THE BURNER.

Is the burner clean? The life of the flame is the air it sucks through the holes in the disk around the wick tube. If the flame is smoky, see whether these holes are clogged or gummed. If so, boil the entire burner for a few moments in sal-soda water.

4. TRIMMING

Does the wick need to be trimmed? If yes, do not scrape it off; this hurts the wick and fills the burner with soot. *Cut it evenly across the top* and *slightly on the corners.*

Trim the wick every day. Put in a new wick *once a month.* The expense of a new wick is trifling. Dry a new wick thoroughly before putting it in the lamp.

By following the above rules and using only the *American Wick*, you will get perfect light, as harmless to the eye as sun-light.

We make wicks for every style of burner in the market. For samples, prices and all information, address
